

A Better Way to Manage and Share Fleet Documents

Digital Permit Book is the first platform to display and share documents based on the vehicle and trailer currently assigned to the driver. Through the Platform Science integration, those assignments update automatically — swap a trailer and the paperwork swaps with it.

Driver Experience

Drivers view, share, and email any document straight from the tablet. Platform Science single sign-on means no second login, and the document set updates itself as the driver's vehicle and trailer change.

Save on Document Management

On average, per 100 trucks per year, fleets save \$9,557 on document management, eliminate 10,125 miles of rerouting trucks to swap paperwork, and recover 281 hours of office time.

Bulk upload replaces thousands of documents in minutes instead of days. No rerouting drivers to a terminal, no faxing, no mailed packets.

FEATURES + BENEFITS

Document Sharing

Share any document at the fleet, driver, current vehicle, or current trailer level. Drivers send documents back from the road.

Offline Documents

Fleet, driver, vehicle, and trailer documents are stored on the tablet and updated automatically, so they work with no signal.

Expiry Notifications

Drivers and office staff are notified automatically before any credential expires.

Bulk Upload

Onboard or replace thousands of documents in minutes instead of days.

Go Paperless

Stop printing, mailing, and refilling. Every document lives digitally and updates itself.

Avoid Violations

Drivers always carry current permits, so paperwork stops being a citation risk.

“

[Digital Permit Book] alone has saved us so much time versus updating the permit books by hand throughout the year.

Amber Schlering

Fleet Safety Supervisor, Ploger Transportation

”

Why Digital Permit Book?

Fleets get full control of every document and every update in one dashboard, and drivers get them instantly on the tablet. The result: thousands of hours saved, fewer on-road citations and DOT violations, and a completely paperless operation.

See it running on your Platform Science tablet.
