

FOR COMMERCIAL FLEET OPERATORS

REAL-TIME **DETECTION** INSIDE EVERY TRUCK.

Fleet Defender enables our customers to operate their vehicles anytime, anywhere without fear of compromise. Neural Sentinel™ runs continuous detection inside the truck and surfaces threats in your VSOC.

THE PROBLEM

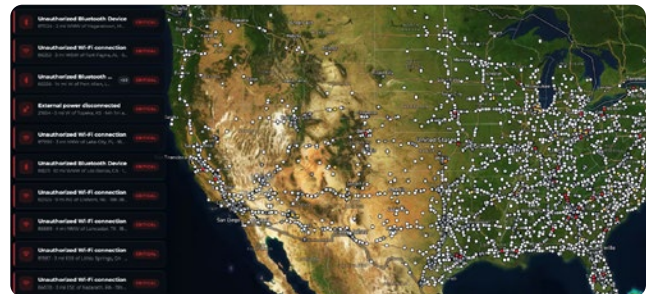

YOUR TRUCKS ARE COMPUTERS ON WHEELS. THE THREATS ARE ALREADY INSIDE THEM.

Cyber and theft events are routine now. One Fleet Defender customer with 10,000 trucks sees roughly **1,000 security alerts every month**. Telematics, ELDs, trailer sensors, and service ports are ways in. Fuel cards and trailer doors are ways out. Your IT perimeter sees neither.

Fleet Defender is built by the people who spent decades attacking vehicles.
We know what to look for because **we built the playbook.**

VEHICLE SECURITY OPERATIONS CENTER ONE DASHBOARD. EVERY TRUCK. EVERY THREAT.

The VSOC gives your team real-time eyes on every truck: location, status, severity, and active alerts on one screen. Detection continues overnight, on weekends, and during yard time.

HOW FLEET DEFENDER WORKS

- 1 Software, Not Hardware**
Installs onto your existing telematics.
No new devices on your trucks.
- 2 Enroll Every Truck**
Deployed through your telematics mobile device management.
Enroll your whole fleet, not a subset.
- 3 Detection Runs at the Edge**
Unauthorized connections, tampering, GPS spoofing. Fuel card, cargo and trailer events.
- 4 Your Team Sees It and Acts**
Threats surface in the VSOC by severity. Your team closes each with a disposition.

OPERATE WITHOUT FEAR.
