LOAD PLANNING & DISPATCH
optym.com

Plan every load profitably

Optym Truckload is planning and dispatch software for full truckload fleets. It connects to the TMS you already run, pulls in your loads and drivers, and plans the entire fleet in a single click, deciding which driver takes which load and in what order. Planners review and adjust before anything publishes back to the TMS. Live hours and truck positions come from Platform Science, so planners can re-plan accurately at any time.

About us

Optym delivers efficiency, enhances profitability, and solves complex challenges for transportation and logistics companies though purpose-built optimization software. Trusted by industry leaders and Fortune 500 companies, Optym combines cutting-edge optimization techniques with decades of industry expertise to provide smarter, faster decisions and measurable results.

Manual planning costs more than planning time

Planning decides which driver takes which load, when, and in what order. It also decides which spot freight to accept, where a driver fuels, and whether to relay a load or combine two partials. Planners make those calls dozens of times a shift, under pressure, against a limited view of a network that is constantly changing.

No team can weigh every combination at that speed, so good planners settle for a plan that works instead of the one that pays. The gap shows up as empty miles, trucks that sit, drivers who miss their home time and their weekly miles, and a planning team that spends its shift building the plan rather than improving it.

optym.com

Features + benefits

LOAD PLANNING

Evaluates millions of driver-load matches and recommends the best. Fewer empty miles, more profit per truck.

LOAD SOURCING

Searches load boards and ranks spot freight by profit and network fit. Gets drivers home loaded, not empty.

FUEL OPTIMIZATION

Decides where to stop and how much fuel to buy on each route. Lower fuel spend without extra detours.

DRIVER PREFERENCES

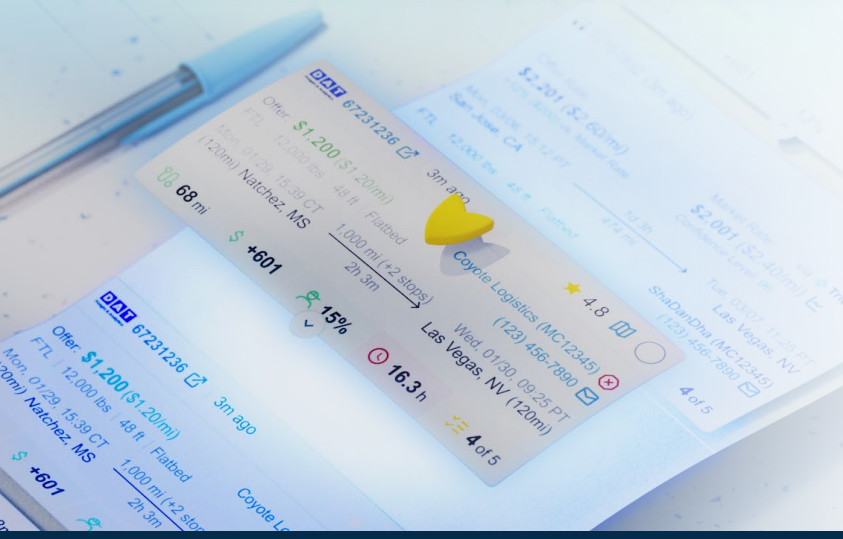

Builds tours around weekly miles, home time, and time off. Drivers get the miles they were promised.

ETA VISIBILITY

Builds arrival times from planned miles and remaining hours, updated as drivers move. Service issues surface early.

EXPLAINABLE SCORING

Scores every recommendation on cost, utilization, and performance. Planners see the alternatives and choose.

> Out of several vendors we explored, Optym stood out as the only one that could deliver what we needed. They've been a fantastic, collaborative partner and Optym Truckload has delivered everything we've asked for.

See it on your own freight first

Start with a free Proof of Value. No integration required. You'll see your fleet's empty miles, revenue per truck, and profit, next to what Optym would have planned.

If the results are worth acting on, an optional Live Trial is available to gauge planner adoption and see the real-world impact before you commit to anything. When you're ready, licensing comes with a 3x ROI guarantee.

Ask your Platform Science representative to make the introduction.
