This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Omschrijving
20301	We've enhanced the planning screen. When the application receives signalR messages only then will we show the refresh icon and give the user the possibility to immediately (manually) refresh their screen. So, whenever the data you are seeing is not the latest, and an update is done meanwhile (i.e., by users on different workstations or multiple tabs), the icon will appear on the planning screen. If you're not selecting this icon, the refresh will run automatically at 5 mins max (hence the timer display). 
20528	Online registration module: For the printed version, the translations were not properly supported. This is now resolved. 
19225	When completing a receivable payment on the proforma, we incorrectly updated the guest name to selected receivable contact. This is now resolved. 
20179	Online rooming list: we fixed two issues related to the save button on this pop-up screen. 1. The save button would drop off the screen when dealing with a long list due to a large group. 2. After entering last name, which is a mandatory field, the save button would not appear. Both issues have been resolved with this patch.
