This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Omschrijving
17603	For hotels using multiple reservation types (M&E, Rental, Rooms, etc) and using the PayByLink integration, we observed that when selecting the "Open room" button from the PayByLink overview screen, the room type and room information were missing. This is now fixed. In addition, based on the detail stay where the payment is booked, the "Open room" button should redirect you to the corresponding detail stay reservation. 
20982 & 20966	During recent updates, the translations for the rate name were lost, causing the existing parameter {{_Rate}} to no longer support translations in the communication templates. This is now restored and we now support the translations for both rate name and rate long description.  
20627	For the online registration form, when switching between the languages, we observed that the hotel policy section was not updating properly with translations. This has been restored. 

20668	In the communication templates, we had a translations discrepancy for the country parameters. The translations were not properly updated. The following parameters have been restored to support the translations. <pre> {{_ContactCountry}} {{_ContactBillingCountry}} {{_GuestCountry}} {{_GuestBillingCountry}} {{_BookerCountry}} {{_BookerBillingCountry}} {{_CompanyCountry}} {{_CompanyBillingCountry}} {{_TravelagentCountry}} {{_TravelagentBillingCountry}} {{_HotelCountry}} </pre>
20936	Winston POS: we faced an issue with refunds when booking the refund with negative quantity. This is now restored.
18533	Mplus POS: Mplus uses an article specified as BPE (which means break, promotion and own use") which we should consider as a 100% discount. Previously, this article was not supported, but now have made enhancements to support this. We will use the BPE description to label the article.
20173	We observed an issue when using a bookingsplan product with the condition charge next day and editing a reservation. When editing a reservation, the first night rate on reservation calculation was missing the charge next day product, hence giving an incorrect price. It was then taking this same value also for the remaining nights even though in the pop-up it was showing the correct value for the remaining nights. This issue is now resolved with this patch release.
