Fixes Document

15-12-2025
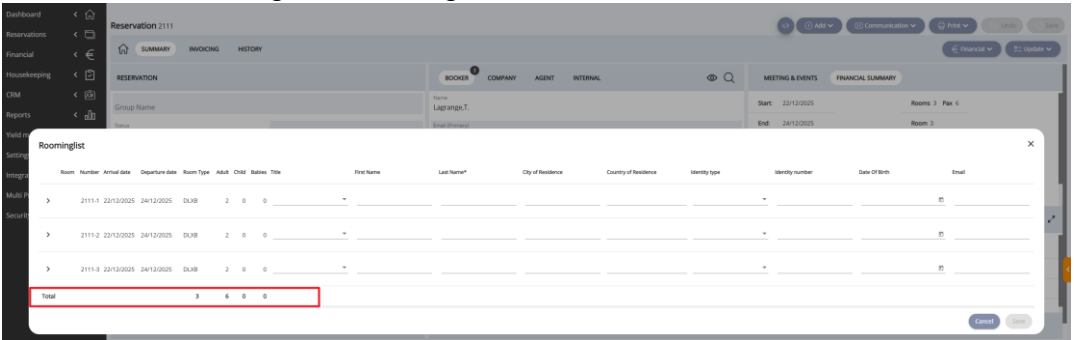

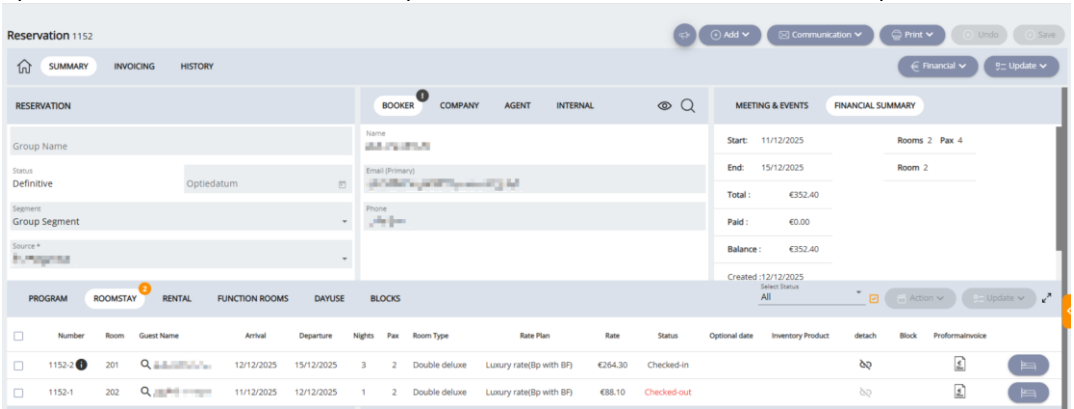

This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Omschrijving
21532	The total row was missing on the rooming list screens which now has been restored.
21943	We observed another issue during a room move of a checked-in reservation (with a future departure date). We observed that the previous reservation was updated to the status cancelled instead of the expected status checked-out. This has been restored to ensure the old reservation is updated to checked-out. The issue reported last week was based on a current departure date.
21842 & 21914	M&E: whenever a program/program item was updated, the reservation details were not updating properly resulting to problems trying to print or download the proforma. This is now restored.
21295	RateGain channel manager: the following enhancements have been implemented with our integration with RateGain: • When the same XML is sent twice, the system does not cancel the old reservation or create a new one. The existing reservation remains unchanged. • For past reservations, modifications are not applied. • For checked-in reservations, modifications are not applied. • For cancelled reservations, modifications are not applied.
