This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Omschrijving
13192	<p>When creating a new rate, we identified a screen refresh issue on the Assign Rooms tab. In exceptional cases—specifically when no packages had ever been configured—the buttons used to update the newly created rate would incorrectly appear under Packages instead of Rates. This screen refresh issue has now been resolved.</p> 
16782	<p>For the following reservation types—Planner, Day Use, and Function Rooms—we observed an issue where, after saving modifications (such as updating the remarks section or changing arrival/departure times), the reservation status would incorrectly change from Checked-In back to Reservation. This issue is now resolved.</p>
22031	<p>CRM: If no VAT number was entered in the application, the country code was automatically populated based on the profile's address. This caused issues with financial exports, as only the country code—without any additional numbering—was stored in the database. This has now been corrected. VAT numbers that contain only a country code are no longer stored; they will be saved only when both the country code and the corresponding numbers are provided.</p> 
18827 & 19505	<p>Alerts dashboard: We observed an issue where updating an option date at summary level did not trigger a corresponding update of the task on the Alerts Dashboard. This issue has now been resolved. This also includes when a reservation is cancelled.</p>
19959 & 21212	<p>We optimized the Daily Report and Occupancy Report to run as efficiently as possible, minimizing the risk of timeout errors.</p>
