

## Fixes Document

27-01-2026

This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Omschrijving
16811	<p>The <b>Update</b> button was incorrectly enabled on the summary screen for no-show (inactive) reservations. It has been corrected and is now available only for reservations with an active status.</p> 
17556	<p>The attachment selection has been disabled for Accounts Receivable templates because attachments these templates are designed to function only within the Accounts Receivable template category and do not support the attachment template category.</p> 
19179	<p>We fixed an issue on the room rack screen where the pop-up showed an empty name if a reservation was created without a booker or guest.</p> 
19899	<p>We improved the warning messages shown when checking in a reservation from the summary screen.</p> <ul style="list-style-type: none"> <li>• If no guest profile is assigned, the message <b>“Assign the guest profile”</b> is displayed.</li> <li>• If a guest is assigned and the hotel uses VisitorData, but the city and country are missing, the message <b>“City and country are mandatory”</b> is displayed. If the hotel does not use VisitorData, city and country are not required, and check-in is allowed once a guest profile is assigned.</li> </ul>
22523	<p>An issue was observed in the advanced search filter where some fields were not selectable. This has now been resolved.</p>

22254 & 22129	We identified an issue in proformas where, for stayover reservations, with past dates (up to the day before yesterday), the Tourist tax was added twice, causing errors and preventing the proforma from opening. This issue has now been resolved.
22297	An issue was reported in the Rate Configuration for Rate Dependencies, where entered or updated values were not retained in the overview. Even after refreshing the screen, the updated values were not visible. This issue has now been fixed.
22333	When a hotel attempted checkout shortly after midnight, UTC-based validation caused the reservation to be misclassified as Day Use. The system now validates checkout using the hotel's local DateTime, preventing this issue.
21717	On the room rack screen, pop-ups at the bottom were previously cut off while scrolling. This issue has now been resolved, and the pop-ups display properly.
22058	<p>When adding an M&amp;E function room reservation on the summary screen, the date picker was incorrectly defaulting to the current date instead of the already booked future date. This issue has now been resolved.</p>
