Fixes Document

03-02-2026

This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!
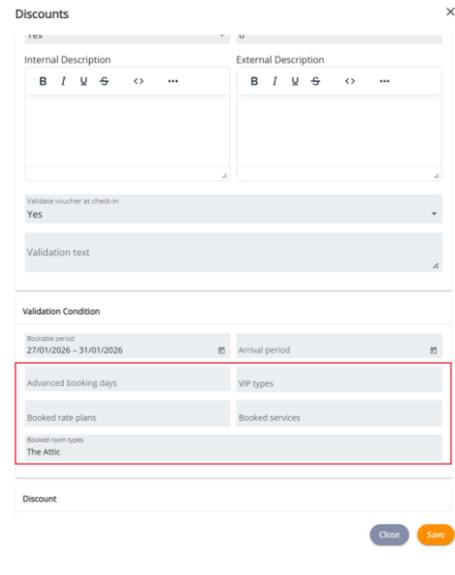

The following items have been fixed:

Case	Omschrijving
22725	An issue was observed in the **No Show** and **Early Departure** process where users were unable to advance to step 3 to calculate the applicable charge. This is now restored.
22269	It is now possible to update the rooming list for reservations with a definitive or optional status.
21978 & 22059	M&E: we observed that combination room bookings were not blocking actual rooms for the full reservation period. For M&E reservations, both main rooms and combination sub-rooms are now blocked correctly, both when creating the reservations and copying the reservations.
22298	M&E: We observed that when downloading/printing a Function Sheet, the **Booker**, **Company**, and **Group Leader** details did not appear on the output. This issue occurred only for hotel groups due to the contact retrieval logic applied at the multi-property level. This has now been resolved.
22681 & 21987	We identified an issue that occurred when creating a credit invoice when editing dates, in cases where additional booking costs applied. These additional costs were not correctly included on the credit invoice, which caused the outstanding amount to appear incorrectly. This was due to internal processing logic and has now been resolved.
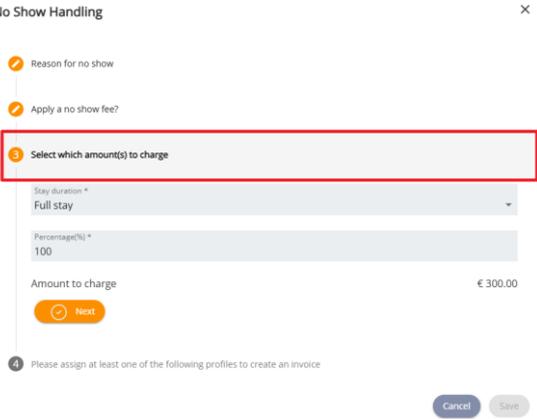

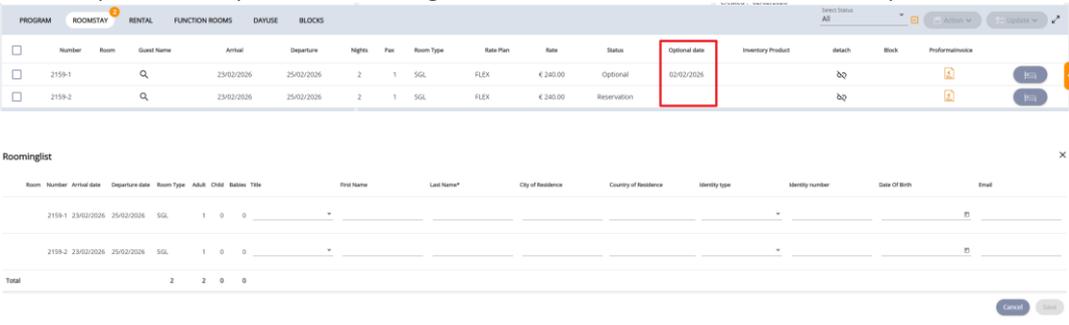

VIPS | CLOUD PMS.

22171	For the **Early Departure** feature, we identified that after processing an early check-out, the fee was correctly applied, but the remaining lodging costs were not properly counter booked. We have restored the logic to ensure that all charges are now handled correctly.
22709	In the recently released Discount Module, we observed that saved **Validation Conditions** configurations were sometimes not displayed correctly in the configuration pop-up. Although the configurations are saved properly in the database, the pop-up occasionally showed them as missing. This issue has been addressed to ensure the configurations consistently display as expected.
20210	**Main Dashboard – Unhandled Reservations Tab:** We identified that when loading the dashboard for the first time, the **Paymaster** and **No Room** reservations were correctly excluded. However, when switching between screens, these reservation types would unexpectedly appear. This behavior has now been fixed to ensure that the **Unhandled Reservations** tab consistently displays the correct reservation types. For clarity, this tab will display the reservation types: **Roomstay**, **Function Rooms**, and **Dayuse r**eservations. **Paymaster** and **No Room** reservations are excluded.
