This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
23058	We identified an issue in M&E programs where deleting a program item caused a visual issue that made it appear as if the entire program disappeared. This has now been corrected.
23067	We identified an issue where the PO reference field on proforma invoices could occasionally no longer be updated. This functionality has now been restored.
21738	In the POS mapping screen, the ability has been added to manually assign the POS revenue group type. Previously, mapping could only be completed after postings were made. This improvement now allows mapping to be configured beforehand.
22077	We identified an issue where salutations were not properly translated. This has now been corrected.
22462	We identified an issue where the Cashier Report – Due Today overview occasionally showed incorrect guest names. This has now been corrected.
23036	We identified an issue in the Accounts Receivable module where the page failed to load when the contact's first name was empty. This has now been corrected.
23048	We identified an issue where group folios could show an empty room or guest name. This functionality has now been restored.
