

Fixes Document

10-03-2026

This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
22560	<p>A small adjustment has been made to the Summary screen – Roomstay tab. The value displayed in the Rate column is now based solely on the room rate and no longer includes tourist tax.</p> 
23038	<p>We identified an issue where recalculating the tourist tax added additional tax charges to the folio instead of recalculating the existing amount. This occurred only for rates that used booking plans with the tourist tax product. The issue has now been resolved.</p>
23108	<p>We identified the following issue when creating a new reservation: if a rate has a Booking Plan and the Booking Plan product is configured with Charge Next Day = Yes, the amount is added immediately when clicking the Save button during reservation creation. This is now resolved.</p> 
23135	<p>We identified an issue where a hotel was unable to prepare the sheet meeting. When the page was requested, it kept loading continuously. Due to the large amount of program data configured for the hotel, the existing query was unable to retrieve the information efficiently. The query has been optimized to support this and improve performance.</p>
