This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
23388	We identified an issue where the rooming list was displaying duplicate reservations during both printing and updates. This has now been resolved.
23417	Last week we fixed the following: For reservations containing multiple rooms, the roomstay numbers were previously displayed in a non-sequential and mixed order. While stay numbers cannot always be strictly sequential due to differences in arrival dates, they are grouped based on the following sorting order: <ol style="list-style-type: none"><li>1. Status</li><li>2. Arrival Date</li><li>3. Departure Date</li><li>4. Sub-number</li></ol> This same logic is now also applied to the rooming list.
