

## Fixes Document

21-04-2026

This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
23166	<p>Discount module: We identified an issue in the discount module where configurations could not be created or updated if the discount name exceeded 20 characters. This limitation has now been resolved, and the maximum length has been increased to 250 characters.</p> 
23688	<p>Registration form: We identified an issue where printing the registration form from the summary screen could generate forms for a different reservation. Additional validation has been implemented to ensure the correct reservation forms are produced.</p>
23693	<p>Alerts dashboard: For the channel manager cancellation task, the label of the charge button has been updated to "Process" for improved clarity.</p> 
23755	<p>Kiosk: During kiosk check-in for multi-room reservations (e.g., two rooms with different guest names), an error could occur when entering guest details. This was caused by a conflict in the match-and-merge validation when attempting to create contact with empty billing information, resulting in an endpoint error. This issue has now been resolved.</p>
