This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
23735 & 23791	We identified an issue in CRM company profiles where saving updates incorrectly triggered an error message indicating a duplicate receivable number. This issue has now been resolved.
22921	We identified an issue where address information entered in guest profiles could intermittently disappear after saving or following reservation processing, resulting in incomplete records. This behavior was linked to working in multiple tabs on the same reservation—updates made in one tab could overwrite or disrupt profile changes made in another tab.
