This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
22644	<p>An error message was displayed when attempting to save the Group Name and M&amp;E Event information at the summary level when the reservation contained blocks. This issue has now been resolved.</p> 
24272	<p>We observed an issue where a grouped detail booked on a proforma (for example a restaurant charge) could not be split at the product/detail level. Although the system displayed a success message when a split was attempted, the split did not take place. This issue has now been fixed.</p>
24370	<p>An issue was identified where, upon application startup, the main dashboard did not load correctly and would take over the entire screen. This issue has now been fixed.</p>
24409	<p>After the sprint release, the Events Bell icon was no longer visible on several screens, including the Rack and Planning screens. This issue has now been fixed, and the icon is visible again as expected.</p> 
24411	<p>We identified an issue where the currency symbol on printed Function Sheets was incorrectly displayed as dollars (\$) instead of the hotel's configured currency symbol.</p>
24413	<p>For M&amp;E Program modifications, we identified an issue where updating the pax count for empty program items triggered an error message. This is now fixed.</p>
24434	<p>The Registration Form printing functionality was found to be buggy and incomplete, leading to unexpected behavior during the printing process. This issue has now been fixed.</p>
24440	<p>An issue was identified in the OBE where newly uploaded pictures were not displayed in the image list after upload, despite the upload appearing to complete successfully. As a result, the images could not be selected and assigned. This issue has now been fixed.</p>
24444	<p>An issue was identified in the Occupancy Report that prevented the Number of Overnight Stays and Occupancy graphs from displaying, causing a "Data not available" message to appear instead. This issue has now been fixed.</p>
