This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
21572 & 23084	In the Online Booking Engine (OBE), existing rate configurations will now remain visible even when a configured rate has expired or has an invalid date range. Previously, these configurations would appear empty when the rate was no longer valid. This fix ensures that: - Existing configurations continue to display their configured rates. - Inactive or expired rates remain visible in existing configurations. - Invalid or expired rates are not available for new bookings or configurations. Example previously: 
22581	Previously, PMS rates with a future start date were not displayed when mapping rates to the Online Booking Engine (OBE). With this fix, future-dated PMS rates can now be displayed and mapped to the OBE as expected. This allows users to configure and map rates for future periods. 
24561	For reservations with multiple roomstays, users can navigate between each roomstay to review the roomstay details via the Page Up and Page Down functionality (also via the navigation icons). Previously, after making changes to the guest profile, and returning to the roomstay screen, the navigation arrows on the Page Up and Page Down functionality stopped working, preventing users from navigating between roomstays. Users can now navigate between all roomstays using the Page Up and Page Down functionality as expected, even after updating guest profile details. 
25396	Previously, the Weights settings overview and detail view displayed contradicting end dates. The overview for example showed an end date 31/12/2031, while the detail view showed 31/12/2030. The end dates are now displayed consistently across the overview and detail views. 

24573	Meeting & Events: Previously, the M&E Room Type of a function room configuration could be changed even when the room was already assigned to existing reservations. This could disrupt the associated M&E reservations. The M&E Room Type can no longer be changed when the function room is assigned to existing reservations. The system now validates this when saving the configuration and prevents the change from being saved. The following message will appear: <i>The M&E Room Type cannot be changed because the function room is assigned to existing reservations.</i> Meeting Rooms x 
25440	We observed an issue when processing a No Show on a reservation with a closed invoice. Although the No Show was successfully financially processed, the reservation remained visible in the No Show Queue on the Main Dashboard. The No Show Queue is now cleared correctly when No Show handling is performed on a reservation with a closed invoice.
