This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
26052	We identified an issue with how availability was sent to the Channel Manager when a reservation was created through the OBE (Online Booking Engine) for a multi-room stay. When a multi-room reservation was created, availability was sent to the Channel Manager only for the first room detail associated with the reservation. Availability for the other room details included in the same reservation was not being sent. As a result, the Channel Manager did not receive complete availability information for all rooms included in the multi-room reservation. This issue has now been resolved.
26148	For our Meeting Select integration, we identified an issue where mapped services were not being processed correctly in the reservation. This issue has now been resolved.
