This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
25036	An issue was identified where transferring a product from a reservation to an existing collective invoice caused the Payment Total and Balance amounts to be calculated and displayed incorrectly in the Cashier → Collective Invoice Overview. The transferred product amount was incorrectly reflected in the Payment Total, even though no payment had been made against the collective invoice. The collective invoice calculation has been corrected. The Payment Total now reflects only the actual payments made against the collective invoice, while the Balance is recalculated correctly based on the outstanding amount of the proforma, including any products transferred from other reservations.
25814	The Room Management expiration notification was also checking other planner types, such as Rental, which resulted in notifications unrelated to the page the user was directed to. This could cause confusion when the expiration is related to a different configuration than hotel rooms. The expiration check has been corrected to consider hotel rooms only, ensuring that notifications are relevant to the Room Management page.
26208	An issue was identified in the Blocks module where it was possible to make block pickups exceeding the actual block size. This has been corrected to ensure that block pickups cannot exceed the defined block size.
26290	An issue was identified where Custom Reports could not be printed due to an error. This has been corrected, and Custom Reports can now be printed successfully.
