This document contains a list of all improvements implemented today. We, the VIPS CloudPMS team, are constantly working to improve and update the application. We can't do this without your help. Thank you!

The following items have been fixed:

Case	Description
26028	We resolved an issue where sorting did not work correctly for some columns in the Arrivals List. Sorting now works correctly for the following columns: • Status • Guest Name • Booker Name • Room Type Sorting for the other Arrivals List columns continues to work as expected.
26181	We resolved an issue where adding a Group Leader to an existing reservation could cause the page to remain in a loading state, requiring a refresh before the user could proceed. The issue has been resolved, ensuring that Group Leaders can be added to existing reservations without interruption.
