Co-Founder &
Director

Moving at the speed of science

TrialEdge AI is copilot for clinical and regulatory documentation, designed to reduce manual effort while improving the quality and consistency of submissions.

TrialEdge AI accelerates clinical and regulatory affairs with intelligent automation – reducing timelines, cutting costs, and improving data quality so life-saving treatments reach patients faster.

“The CHICC program has given us the thing that's hardest to find in the Australian digital health ecosystem: honest, practitioner-level feedback from people who've actually built and exited healthtech businesses, not just advisors with theoretical views.

The structured seminars and workshops were rigorous in a way that external advisors rarely are. They forced us to stress-test assumptions we'd been carrying since day one, replacing optimistic modelling with a commercial case that holds up under scrutiny. Beyond the formal program, the network introductions accelerated conversations with Australian strategic partners that would otherwise have taken us 12–18 months to cultivate.

CHICC has helped TrialEdge AI see regulatory documentation bottlenecks not just as a local problem, but as a globally scalable opportunity, providing strategic clarity that directly informed our expanded platform roadmap and our go-to-market sequencing, and supporting a Victorian-built product that can benefit patients sooner.
