## WE PRINT ...

... and guarantee the best printing results. We work with you to find the best printing process for every requirement.

### PRINTING PROCESS - PANEEL

#### DIRECT PLATE PRINTING

A special combination of inks and UV radiation allows us to print directly onto our panel material. The robust surface is designed to perfectly convey your graphics with brilliant colors and high contrast reproduction. This process is characterized by durability and high quality.

#### PROTECTIVE LAMINATE

A protective laminate provides your films or prints with excellent protection against environmental influences and ensures long-lasting preservation. Scratches and unsightly abrasion marks are largely prevented. For use at trade fairs, we recommend matt film, for example, as it does not cause reflections from spotlights. Glossy film enhances your print and gives it more depth.

#### FILM PRINTING

Film printing is the classic printing process. We print our films exclusively with environmentally friendly latex ink. In combination with various finishing techniques, films can be further processed as desired. Whether die-cut, punched or laminated, the application possibilities are endless.
