Video Editor & Graphic Designer (Full-Time)

Location: Onsite (Bengaluru)

Type: Full-Time

Experience: Minimum 1 Year

Compensation: 5LPA- 7LPA

We are looking for someone **"smart-lazy."** You're the type of person who finds the most efficient way to get high-quality results in the shortest time. We don't value "busy work"—we value outcomes, automation, and clever systems that let you produce more while working smarter.

The Role

As our Video Editor & Graphic Designer, you will be the visual heartbeat of Capabl. You'll move beyond simple editing to help build our digital presence—from high-impact social content to assisting in the evolution of our web platforms.

Key Responsibilities

- **Video Mastery:** End-to-end editing for social media, high-conversion ads, and brand documentaries using Adobe Premiere Pro.
- **Motion & Visuals:** Elevate our storytelling with motion graphics, VFX, and sleek animations in After Effects.
- **Graphic Design:** Create high-fidelity assets in Photoshop for marketing campaigns and internal initiatives.
- **Web & UI Collaboration:** Translate design concepts into reality. You'll use **Figma** to review UI assets and work within **Webflow** to help build or update landing pages and CMS collections.

Requirements

- **The Tech Stack:** Expert proficiency in Adobe Premiere Pro, After Effects, and Photoshop.
- **The Experience:** At least 1 year of professional experience in a fast-paced creative environment.
- **Web-Curious:** You should have a solid understanding of **Figma** and a genuine interest in (or willingness to master) **Webflow**. We don't expect you to be a pro coder, but we need you to be excited about building for the web.
- **Hardware:** A high-performance workstation capable of handling 4K renders and complex multi-layer compositions without breaking a sweat.
- **Ownership:** You meet deadlines because you hate being behind, not because someone is chasing you.

Why Join Us?

You won't just be "the video guy/girl." You will be an integral part of an IITian-founded startup that is bridging the gap between industry and academia. You'll have the creative freedom to experiment with new tools (like AI-driven workflows) and the autonomy to own your projects.
