WORK EXPERIENCE

Software Engineer, Full Stack

Mar 2026 - Present

Fuze Health

- Owned end to end project delivery from UX design and Jira ticketing through development and QA for key initiatives, including admin platform features and landing pages
- Partnered with a cross functional design team of 3 to 4 to refine and enhance user interface designs, improving overall usability and user experience
- Leveraging AI driven Figma workflows using Figma Make
- Utilized Webflow to implement designs of landing pages

Software Engineer, Full Stack

Feb 2022 - Mar 2026

Fuze Health (formerly Truepill)

- Collaborated with a cross functional team of 5 to 12 in architecting and launching a virtual pharmacy platform for enterprise healthcare clients including Eli Lilly and Optum, leveraging React, TypeScript, Styled Components, SQL, and Google Cloud.
- Led multiple teams of 4 to 6 engineers in implementing development projects, including Single Sign On implementation using OpenId Connect
- Onboarded and mentored new team members, ensuring a smooth transition and fostering a collaborative team environment
- Led a project to enhance front-end analytics on the website utilizing Mixpanel and Datadog, resulting in improved data insights and user experience
- Designed and maintained backend workflows and data integrations using Python, SQL, and Google Cloud services to support prescription processing and reporting.
- Led knowledge transfer sessions with both internal teams as well as enterprise clients
- Used Contentful as content manager in order to keep customized content consistent between web pages and products

Full Stack Developer

Aug 2020 - Nov 2021

Telzio, Inc.

- Designed and developed an audit log service using AWS Simple Queue Service, Lambda Functions, and DynamoDB that tracked data changes throughout the user application
- Worked in a team of four to develop API Endpoints that retrieved and manipulated system data to be used by the user portal and mobile application using C# and .NET Core
- Assisted in front end development of VoIP mobile application using React Native
- Integrated AWS Elasticsearch into project in order to list and search mass data sets
- Led development of a Unit Test creation for .NET Core API that utilized MSTest and the MOQ Framework

Software Engineer Consultant

Jun 2019 - Jun 2020

Tallan, Inc.

- Developed API endpoints in C# as well as created the corresponding documentation for each endpoint
- Created a company overview Power BI project that helped management identify how consultants were allocated on projects
- Earned Microsoft certification in C# after completing extensive formal training
