

Behavioral Health: Meet Your New Front Door

Ushur helps state Behavioral Health programs collect accurate, complete, and standardized data from the individuals and organizations you oversee — creating the transparency you need to measure performance and ensure accountability.

One connected network. Standardized data.

Engage individuals and organizations, collect and validate the right information, and standardize data across your program — all on a single, secure, governed platform.

AI that removes barriers and gets it done.

Ushur's Voice-Guided Experience synchronizes natural voice conversations with interactive visual experiences to improve information collection and journey completion.

95% Faster Data Collection

Voice + visual

Synchronizes experience guides users through complex workflows

74 languages

Natural, conversational support for diverse communities

Accessible

ADA/WCAG compliant for inclusive experiences

End-to-end completion

From intake to submission with validation, escalation, and follow-up

Standardized data. Stronger oversight. Greater impact.

Ushur gives state leaders the insights they need to measure performance across CBOs and other funded organizations — and ensure the people and communities they serve receive the care and support they deserve.

From consistent data to real outcomes.

When information is collected more consistently across your Behavioral Health program, state leaders can:

Improve reporting

Reduce the reconciliation required across inconsistent data sources.

Create transparency

Gain a consistent view of performance across CBOs and other organizations you fund.

Benchmark performance

Identify organizations falling below expectations — and high performers that can set the standard.

Drive accountability

Give leadership the information needed to ensure funded organizations are delivering on the services and outcomes they're meant to provide.

Built for regulated government programs.

Ushur provides the governance, auditability, observability, and data protection required for sensitive government workflows.

Access

Support engagement across 74 languages and accessible experiences.

Security & compliance

Enterprise-grade security, role-based access, audit trails, and human oversight.

Integration

Work alongside your existing state, provider, and case-management systems without requiring a core-system replacement.

Let's build a more connected, accountable future.

See how Ushur can help your state collect trusted data and create accountability across your Behavioral Health program.
