

MIVO CONNECT

Meter Collection Cabinet IC24

IC24 is a data collection unit that includes MIVO Connect LTE and four MIVO M-Bus Extender 256 modules. The unit is made of impact-resistant ABS plastic and complies with the IP65 standard. It is equipped with a circuit breaker.

MIVO CONNECT DATA GATEWAY LTE

MIVO Connect is an open M-Bus gateway for collecting meter data in buildings. Data is gathered via internal or external interfaces, including M-Bus, M-Bus over IP, or Modbus RTU/TCP.

The collected data can be transmitted via 4G/5G connection to one or more user-defined services, including cloud-based services and local control systems.

To prevent data loss during network or power outages, the device includes local storage. In addition, it features routing functionality and a user-friendly web interface to simplify administration and troubleshooting.

MIVO M-BUS EXTENDER 256

The MIVO Connect M-Bus Extender 256 is an add-on module that expands the system's M-Bus capacity by an additional 256 M-Bus loads. The system is easily connected using the supplied cable and can be expanded with up to ten modules for M-Bus or wireless M-Bus.

The module indicates faults and measures nominal bus voltage and current for easier diagnostics, both visually and via the MIVO Connect Data Gateway.
