

Removable Prosthetics

When: Q2, 2027

Where: Scottsdale, AZ

CE Credits

Approx. 12 CE Credits

Course Description

This course allows general dentists to explore the full scope of implant overdenture treatment, from treatment planning through surgery to restoration and long-term maintenance. This hands-on course helps clinicians elevate their expertise and provide superior care for overdenture patients, offering practical skills and knowledge they can apply immediately in practice.

Note: This course is currently being revamped and updated content will be available for 2027. Details below reflect the previous course structure and are subject to change.

Learner Outcomes

- Diagnose, treatment plan, and treat implant overdenture patients
- Recognize the differences between various implant configurations for overdenture treatment
- Explain the digital workflow in removable prosthodontics
- Explain implant placement for implant overdentures and planning for future conversion to fixed prostheses
- Explain biomechanical principles and different occlusal schemes
- Describe common overdenture attachment systems and their respective indications
- Perform direct attachment pick-up procedures for overdenture systems
- Understand maintenance protocols and how to troubleshoot surgical or restorative challenges
