

Let's secure your cloud development

LocalStack is the de facto standard for secure, compliant cloud development in the world's most regulated industry.

Built-In Compliance

Keep PII and PFI inside your network perimeter. Fully air-gapped and VPC-isolated - no internet access required.

Predictable Costs

Replace volatile cloud spend with fixed per-user licensing. Reduce non-production AWS costs by up to 80%.

Lightning-Fast Iteration

Unlock concurrent testing with on-demand local cloud sandboxes that deploy code updates instantly.

Production-Grade Fidelity

Run 100+ AWS services locally with full API parity. Validate applications and infrastructure code before any changes reach production.

How LocalStack Works

Give AI agents and human developers an isolated development environment so they can build and validate safely before shipping to production.

01

Develop locally

Use existing AWS SDKs, CLI, and IaC against LocalStack; no internet required.

02

Validate safely

Run unit and integration tests with high-fidelity API emulation running in safe, private infrastructure so data never leaves your network perimeter.

03

Deploy confidently

Promote locally validated code to staging or production environments seamlessly, without delays, complexity, or costs of cloud-native dev environments.

Proven Outcomes

Tier 1 Global Bank

Compliance review cleared 3 months earlier.

4x
faster IaC feedback loops.

80%
drop in Dev/Test cloud costs.

Fortune 100 insurer

Eliminated environment drift & simplified evidence collection for regulatory compliance.

25%
less time diagnosing CI failures.

B2C FinTech

Inner loop reduced from 5 minutes to 20 seconds.

70%
reduction in Dev/Test spend

15x
productivity gain across 100+ AWS services.
