Hase Bikes Workshops

■ Kettwiesel ONE with motors

Ergonomics, adjustments and the latest developments around the Kettwiesel ONE. In this workshop, we provide you with the arguments why the ONE offers the best ergonomics and go through all relevant settings together.

In the technical section, we take a close look at suspension and drivetrain. We exclusively present our height-adjustable suspension fork for the ONE – made by Hase Bikes. The goal is a solid understanding of the technology and adjustment options for consultation, customization and everyday service.

■ Pino & Gravit Tech

Options and accessories for cargo, children and adventure – with a focus on Pino and Gravit. Both bikes are based on the same frame, which means that a large proportion of the accessories can be used for both categories.

From child transport to cargo bike to globetrotter, we provide an overview of the Hase Bikes cargo bikes and tandems and show use cases as well as ergonomic aspects.

We demonstrate installation, use and adjustment options of the various options and accessories and make the similarities and differences of the systems tangible. In addition, we present the new cargo accessories launching in 2026: the Cargo Bag for the front seat on the Pino and the Cargo Rack with bag, which is mounted under the frame on both the Pino and the Gravit.

■ Special needs Bikes and Extras

Rehab solutions for special requirements. Some riders need more than standard – that's exactly why Hase Bikes has developed special rehab options.

In the workshop, you will experience rehab bikes and rehab accessories working together: hand crank drive, shoulder steering, special pedals, fixed drive and further solutions.

Among other things, we present the Kettwiesel ONE in the rehab segment, the wrist rest, the ONE handbike and the fold-away knee brake. In addition, we show how rehab accessories can be used flexibly to optimally adapt bikes and trikes (not only from Hase Bikes) to individual needs.

■ Marketing, Sales & Service Made Easy

Input and exchange on marketing, sales and service. How can we jointly achieve a premium level? How do we want to work together in the future? And what concrete support can you expect from us?

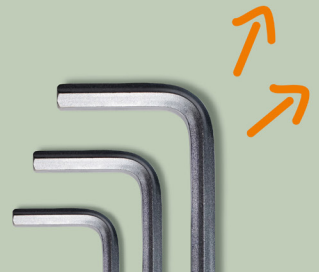

In this workshop, you will also learn how maintenance and repairs can be efficiently organized – from quick spare parts searches and exploded drawings to automatic calculations. All directly in the Hase Bikes configurator.

Using practical examples, you will get to know the Hase Bikes configurator and online shop and gain insights into how digital tools support service and sales processes in everyday business.
