Azure Landing Zone Review

What is it?

The Microsoft Azure Landing Zone Review is a structured assessment that evaluates the readiness, design, and governance of your Azure environment before scaling workloads. It ensures your cloud foundation is secure, compliant, scalable, and aligned with Microsoft's best practices - giving you the confidence to move forward without technical debt or risk.

What it includes

This review assesses your landing zone across key architectural areas such as identity and access management, network topology, governance, cost control, security baselines, and resource organisation. It compares your current setup against Microsoft's Cloud Adoption Framework and enterprise-scale landing zone designs.

Key outcomes

- Validated and compliant Azure foundation.

- Reduced rework and misconfiguration risk.

- Improved scalability, manageability, and security posture.

- Clear next steps to align with Microsoft's best practices.

- Stronger platform readiness for future workloads.

When to do an assessment

✓ Before migrating workloads to Azure

✓ When scaling from pilot to production

✓ After initial setup by third parties or internal teams

✓ As part of cloud governance or architecture reviews
