

Go-Live | Well-Architected Review

What is it?

The Microsoft Go-Live | Well-Architected Review is a pre-launch assessment designed to validate your Azure solution against Microsoft's best practices across five key architectural pillars. It gives you peace of mind that your environment is secure, optimised, and ready for production – avoiding surprises after go-live.

What it includes

This review assesses your deployment against the Azure Well-Architected Framework, covering reliability, security, performance efficiency, cost optimisation, and operational excellence. It combines technical evaluation with practical recommendations, giving you a clear, prioritised path to remediation where needed – before go-live.

Key outcomes

- Confidence that your environment is production-ready.
- Reduced risk of downtime or performance issues post-launch.
- Improved security posture and governance.
- Optimised cost management from day one.
- Aligned deployment strategy based on Microsoft best practices.

When to do an assessment

Before launching a new Azure application or service

When transitioning a proof of concept into production

Prior to major release milestones or customer-facing go-lives

As part of a final sign-off or project governance stage
