

Network Security

Expose weaknesses. Strengthen your defences.

What is it?

We assesses how well your current infrastructure protects against modern threats. We examine your network architecture, access controls, segmentation, and perimeter defences to identify gaps, vulnerabilities and potential attack surfaces.

Why we offer this workshop

As networks grow more complex, so do the risks. This workshop is designed to help you validate your existing network controls, understand your exposure, and take proactive steps to strengthen your security posture.

Key outcomes

- End-to-end review of network security
- Identify misconfigurations & weak points
- Clear prioritisation of risk areas
- Guidance on segmentation & zero trust principles
- Roadmap to strengthen your network defences

What to expect

Kick-off & scoping session

Security configuration assessment

Threat exposure analysis

Security alignment review

Detailed findings and roadmap
