

Penetration Testing

Uncover hidden weaknesses with ethical hacking and strengthen your defence strategy.

What is it?

Our ethical hacking workshop simulates real-world cyberattacks to uncover hidden vulnerabilities in your systems, applications, and controls. You'll gain a detailed understanding of how attackers could exploit your environment – and how to stop them.

Why we offer this workshop

Point-in-time testing is no longer enough. We deliver this workshop to help you understand your risks from an attacker's perspective and validate your existing controls.

Key outcomes

- Simulated attacks to expose weaknesses.
- Targeted remediation guidance.
- Assessment of control effectiveness.
- Aligned with best practices and regulations.
- Strategic roadmap to improve defences.

What to expect

Kick-off and scoping session

Simulated penetration test by experts

Live walkthrough of vulnerabilities found

Evaluation of your control maturity

Final report with prioritised defence improvements
