Remote IT Audit

Gain clarity and control over your IT environment

What is it?

Our Remote Assessment provides a comprehensive audit of your IT infrastructure, covering key areas such as network, security, Microsoft Cloud, and SQL database health. Conducted remotely using secure assessment tools, it identifies risks, inefficiencies, and improvement opportunities across your environment.

Why we offer this workshop

Understanding the true state of your IT landscape is critical to maintaining stability, security, and performance. This assessment helps you identify where issues exist (from network misconfigurations to cloud security gaps) and provides a practical roadmap to strengthen your environment before more complex challenges arise.

Key outcomes

- End-to-end visibility of your IT infrastructure & assets.

- Identification of vulnerabilities & compliance gaps.

- Insight into system performance & best-practice alignment.

- Recommendations to optimise security & configuration.

- A roadmap to support future growth & IT maturity.

What to expect

| Initial scoping session to define objectives & access | Network assessment covering devices, hardware etc. | Security review of AD hardening, password exposure etc. | Cloud and SQL assessments with detailed config analysis | Final report with prioritised risks and remediation roadmap |
