

Microsoft Security Exposure Assessment

What is it?

The Microsoft Security Exposure Assessment is a structured evaluation of your organisation's current security posture across Microsoft technologies. It helps identify vulnerabilities, misconfigurations, and security gaps while providing actionable recommendations to strengthen protection across users, devices, applications, and data.

What it includes

This assessment reviews areas such as identity security, endpoint protection, email and collaboration security, threat detection, compliance, and governance. It evaluates how Microsoft security tools are configured and used, highlighting opportunities to improve visibility, resilience, and response capabilities.

Key outcomes

- Visibility into security risks and exposure areas.
- Improved protection across users, devices, and data.
- Stronger identity and access security controls.
- Prioritised recommendations for remediation.
- Better alignment with security and compliance requirements.

When to do an assessment

Following security incidents or increased threat activity.

Before implementing new Microsoft security solutions.

As part of regular cyber security reviews or audits.

When strengthening compliance and governance frameworks.
