

Microsoft Data & AI Readiness Assessment

What is it?

The Microsoft Data & AI Readiness Assessment helps organisations evaluate whether their data platform, governance, and architecture are ready to support modern AI, analytics, and automation initiatives. It provides a clear understanding of current capabilities and identifies the steps needed to build a scalable and secure data foundation.

What it includes

This assessment reviews data architecture, governance, security, integration, analytics capabilities, and AI readiness. It considers how data is collected, managed, accessed, and protected, while identifying opportunities to improve scalability, operational efficiency, and support for future AI workloads.

Key outcomes

- Clear roadmap for AI and analytics readiness.
- Improved visibility into data quality and governance.
- Reduced risk around security and compliance.
- Better scalability for modern data workloads.
- Stronger alignment between data strategy and business goals.

When to do an assessment

Before launching AI or advanced analytics initiatives.

During data platform modernisation programmes.

When moving from pilot projects into production.

As part of wider digital transformation planning.
