How is CaseMark better than using a free LLM, like ChatGPT?

Purpose built for legal.

CaseMark uses generative AI to assist legal professionals with document review and legal summaries of depositions, trials, hearings, or medical records. Our vision is to support your legal summarization and research needs across the litigation lifecycle, from intake through verdict.

Unlike general-use, large language models (LLMs) from OpenAI, Google, Meta, Anthropic and others,CaseMark is purpose-built for legal. While we use these LLMs, we provide an added layer of legal focus, security, support and accountability in delivering AI powered legal summaries.

Easy-button simplicity.

No more wrestling with complex prompts or wading through irrelevant outputs. CaseMark provides clear, concise summaries tailored to your specific legal needs in minutes, not hours.

No need to disrupt your existing workflow. CaseMark delivers Word or PDF files that are easily editable. We also integrate with popular legal software like Clio and Smokeball.

Rigorous privacy and security.

Highlights important dates and events, such as Unlike freely available LLMs, your data is encrypted at rest and in transit. It is never used to train our AI or shared with third parties! Our Trust Center shows our real-time commitment to safeguarding your data with robust security measures and our compliance with SOC2, Type 2 and HIPAA requirements.

Legal-grade support.

We know legal work happens nights and weekends- not just 9am-5pm EST. CaseMark's offers online FAQs, videos, and in-context support as well as a dedicated customer success team, available via chat, email, or phone.

Trust, but verify!

CaseMark responses are anchored in real, current information provided within the files you provide us. Each summary provides hyperlinks and / or page-line citation tied back to your source document(s), allowing you to easily verify its accuracy.

There is always a small risk of hallucination with generative AI, however, we have architected our product to provide answers based only on the materials provided, thus limiting those chances. If you provide transcript(s), we ask the AI to summarize and refer to ONLY those transcripts.

We're human. Like you.

CaseMark does not replace the role of licensed legal professionals. We believe in the necessity for human verification and oversight in AI-assisted legal documentation to maintain accuracy and integrity.

We test and evaluate our product daily, and work hard to ensure consistency and reliability. We encourage you to review the output of our summaries as well. Your feedback helps us iterate and improve.
