2. Objective

The objective of this pilot program is to evaluate the technical, operational, and policy feasibility of utilizing space-based orbital data storage services for State of Florida agencies.

The pilot is intended to demonstrate how orbital data storage may complement terrestrial systems by providing resilient, geographically independent data redundancy, particularly for disaster recovery and continuity-of-operations use cases.

Results from this pilot will inform future State decision-making regarding adoption, scaling, and integration of space-enabled data storage technologies.

3. Funding

Up to \$1,000,000 in nonrecurring General Revenue funds have been appropriated to Space Florida for implementation of this pilot program.

Space Florida reserves the right to award one or more contracts, negotiate scope and pricing, and adjust program elements as necessary to maximize value and achieve pilot objectives within available funding.

4. Scope of Services

The Contractor shall provide an end-to-end space-based data storage service, including all labor, materials, software, equipment, facilities, licenses, and expertise necessary for successful delivery of the pilot program.

Services shall include, at a minimum, the following components:

- **Integration and Testing:** Support onboarding of up to five executive agencies selected by Space Florida in consultation with the Florida Digital Service.
- **Operations and Maintenance:** Operate and maintain the orbital data storage service throughout the pilot period, including system monitoring, anomaly response, and technical support.
- **Reporting and Analytics:** Provide detailed technical, operational, and programmatic reporting as described in Section 4.2.

4.1 Integration and Testing

The Contractor shall work collaboratively with Space Florida, Florida Digital Service, and participating agencies to ensure successful system integration and validation.

Integration activities shall include agency onboarding, definition of data interfaces, configuration of secure data transfer mechanisms, and alignment with agency-specific technical environments.

The Contractor shall develop and execute a comprehensive integration and test plan that includes system integration testing, performance testing, security validation testing, and user acceptance testing.

Testing shall validate data ingest, storage, retrieval, latency, reliability, cybersecurity controls, and operational procedures under both nominal and contingency conditions.

The Contractor shall document all test results, issues identified, corrective actions taken, and final acceptance outcomes for each participating agency.

4.2 Reporting and Analytics

The Contractor shall provide structured reporting throughout the pilot program to support oversight, evaluation, and legislative reporting requirements.

At a minimum, the Contractor shall submit monthly interim reports summarizing system performance, integration progress, issues encountered, risk mitigation actions, and preliminary findings.

Reports shall include technical metrics, operational availability, cybersecurity posture, agency feedback, and recommended improvements or modifications.

A comprehensive final report shall be submitted no later than January 31, 2027, documenting overall feasibility, validated use cases for disaster recovery and redundant data security, cost considerations, scalability potential, and policy implications.

The final report shall support participating agencies' statutory reporting to the Executive Office of the Governor's Office of Policy and Budget, the Chair of the Senate Appropriations Committee, and the Chair of the House of Representatives Budget Committee, which is due by March 1, 2027.

4.3 Cybersecurity and Data Requirements
