SolarAdvice[®]

Why Solar Advice?

Solar Advice is a modern company with old-world values.

We use modern technology, which enables us to provide an efficient service while still ensuring a personal touch when dealing with our clients one-to-one.

We offer a complete tailor-made solar service to make your solar journey hassle-free.

Honesty and transparency are values we hold in the highest regard, and we will always keep you informed of need-to-know information.

Solar Power is a sustainable, reliable solution to our most common electricity supply issues in South Africa today. Namely, exorbitant electricity prices and instability of the grid.

We believe that it is our responsibility to encourage you, the people of South Africa and neighbouring countries, to take control of your own power needs, and reduce your carbon footprint. Every small step in the right direction impacts the world that we leave behind for future generations.
