

AMPELMANN

Quality Policy

Ampelmann provides safe offshore access to its clients. To achieve the required level of quality assurance and control of Ampelmann products, the Management Team will provide the resources, consistent with operating a safe, efficient and commercially sustainable business, to enable all employees to be committed to:

- compliance to all statutory requirements regarding quality assurance and quality control
- apply recognized techniques and practices to manage product quality
- design, fabricate and maintain its products according to well documented and sufficiently specified requirements that are prepared and agreed upon prior to entering the applicable product life cycle phase
- design and fabricate products that meet their technical lifetime set in the requirements
- traceability of its products regarding used materials, components and critical fabrication, testing and repair methods
- all commercial offshore activities will only be executed with Ampelmann systems that are certified by a Notified Body
- all Ampelmann products are inspected and maintained adequately and on a regular basis to ensure safety, certification and operational performance throughout their lifetime
- compliance to quality standards is independently checked and non-conformities are adequately addressed and dealt with
- continuously improve the quality system, and distribute knowledge and awareness regarding quality throughout the company to increase personal accountability
- provide clear communication to all involved personnel with regards to his or her responsibility and accountability in meeting Ampelmann's quality standards
- alignment between all organizational functions impacting product quality

This policy will be reviewed on a regular basis to ensure that it is appropriately implemented and continues to achieve our requirements.
