Feedback

We trained a RL policy using the provided reward function code...  
**av\_penalty:** ['0.02', '0.05', '0.05', '0.04', '0.03', ...]  
**success\_rate:** ['0.00', '0.38', '1.57', '3.01', '3.95', ...]  
Please carefully analyze the policy feedback and provide a new, improved reward function...

A first person view from the perspective from a human sized robot as it works in an old factory. The robot has many industrial machines nearby in the old factory. The floor is old, wooden, worn and full of rich texture. The camera pans right, at a height of 2m above the floor. Photorealistic
