

PureSkin™

SPLIT-THICKNESS DERMIS

Delivering critical treatment solutions for burn management

AlloSource® has helped save the lives of thousands of patients suffering from severe burns and helped restore function and mobility to countless others. As one of the world's largest processors and distributors of skin allografts used for life-threatening burns and wounds, you can be confident that AlloSource is able to meet peak demand for these critical applications.

Surgeons have long been challenged by severe burns and chronic wound healing. Skin allografts are used successfully as a temporary biological wound dressing for patients in clinical scenarios.

SHORT-TERM GOALS¹

- Infection control, protecting the wound bed from exposure
- Fluid maintenance, decreasing water and electrolyte loss
- Acceleration of granulation to support wound closure
- Conservation of autograft skin
- Pain management

The use of skin allografts in the management of burn wounds allows early excision and wound covering, which may aid in the overall clinical management of the patient.

CRYOPRESERVED STORAGE

VA Vendor #	OEM #	Mesh	Area
CLIN0896	5100-001	1:1	≤ 199 cm ²
CLIN0897	5100-175	1:1	≥ 200 cm ²
CLIN0898	5100-610	2:1	≤ 199 cm ²
CLIN0899	5100-612	2:1	≥ 200 cm ²
CLIN0894	5100-620	Non-Meshed	≤ 199 cm ²
CLIN0895	5100-622	Non-Meshed	≥ 200 cm ²

NOTE: Available through IDIQ Contract: 36C10G23D0066

ALLOGRAFT QUALITY AND SAFETY

AlloSource requires a comprehensive donor physical assessment and a complete medical and social history to identify and eliminate donors that may be at risk of transmitting certain viruses and diseases. Our donor acceptance criteria are based on regulations established by the U.S. Food and Drug Administration (FDA), the American Association of Tissue Banks (AATB) Standards, as well as additional requirements set by the AlloSource Medical Advisory Board.

Donors must test negative or non-reactive in the following assays:

- Antibody to Hepatitis C (HCV)
- Antibody to Human Immunodeficiency Virus 1 & 2 (HIV 1 & 2)
- Hepatitis B Core IgG/IgM Antibody (HBcAb)
- Hepatitis B Surface Antigen (HBsAg)
- Hepatitis B Virus (HBV NAT)
- Hepatitis C Virus (HCV NAT)
- Human Immunodeficiency Virus Type 1 (HIV-1 NAT)
- Rapid Plasma Reagin or Serologic Test for Syphilis (RPR or STS)

BIOLOGICALLY ACTIVE SKIN

- PureSkin is processed to preserve biologic growth factors native to human skin, and cryopreserved to optimize shelf-life
- Native dermal growth factors remain present to aid in the healing process*

SKIN ALLOGRAFT EXPERTISE

- Processed to maximize allograft area, minimizing "patchworking" of smaller pieces in clinical settings
- Cryopreserved allografts packaged in peel-pouch packs for easy OR handling
- Choice of meshed allografts to save valuable OR time, or non-meshed allografts to allow custom adaptability (e.g., "pie crusting" or larger meshing patterns) at site

THE ALLOSOURCE ADVANTAGE

- Allograft tissue supplied exclusively by our partner organ procurement organizations (OPOs), located domestically
- Wide variety of allografts including PureSkin XL with sizes up to 1,800 cm² and greater as well as AlloMend® ADM for reconstructive burn procedures
- Same-day shipping and priority overnight delivery available in dry-ice insulated coolers, from one of our strategically placed regional AlloSource distribution centers
