

ADVANCED ANTIMICROBIAL WOUND MANAGEMENT

FOR EVERY STAGE
OF MILITARY CARE

FROM BATTLEFIELD TO BEDSIDE

Minutes matter and definitive care may be hours or even days away. Field wounds require more than simple irrigation. They require a solution engineered to help protect the wound, preserve healthy tissue, & support the body's natural healing process throughout the care continuum.

ViaCLYR™ is an FDA-cleared wound irrigation solution built on Clyra Medical Technologies' patented Copper-Iodine Complex (CICS™), the next-generation antimicrobial technology designed to meet the unique demands of modern military medicine.

Unlike traditional wound cleansers that provide only irrigation, ViaCLYR combines mechanical wound cleansing with controlled antimicrobial activity that persist for up to 72 hours under repeated microbial challenge in controlled lab testing.

The result is an advanced wound management platform designed to support care from the battlefield to the operating room, through hospitalizations, rehabilitation, and recovery.

WHY VIACLYR MATTERS

Military medicine faces a persistent challenge regardless of the theater of operation: **The longer the time between injury and definitive care, the greater the challenge of preserving tissue and controlling infection and downstream complications.**

Whether treating casualties during prolonged field care, transporting wounded personnel through casualty evacuation, preparing surgical wounds, managing burns, or supporting recovery in military and VA hospitals, clinicians need technologies specifically engineered for extended care not simply immediate intervention.

ViaCLYR was developed with Modern Combat Casualty Care in mind.

FDA
510(k)-CLEARED
MEDICAL DEVICE

PATENTED
COPPER-IODINE
TECHNOLOGY

ANTIMICROBIAL
PERSISTENCE
UP TO 72
IN VITRO

NON-CYTOTOXIC
& NATURALLY
METABOLIZE

NO POST-IRRIGATION
RINSE REQUIRED

VIACLJR DELIVERS A UNIQUE COMBINATION OF PERFORMANCE CHARACTERISTICS:

	FDA 510(k)-Cleared Medical Device
	Patented Copper-Iodine Technology Platform
	Mechanical wound cleansing and irrigation
	Controlled broad-spectrum antimicrobial activity
	Demonstrated antimicrobial persistence for up to 72 hours in vitro
	Non-cytotoxic formulation
	No post-irrigation rinse required
	Naturally metabolized by the body
	Physiologic pH supports optimal wound environment
	Manufactured in the USA under an ISO 13485-Certified Quality Management System

DESIGNED FOR THE ENTIRE CONTINUUM OF CARE

ViaCLJR supports wound management across every phase of military medicine:

Point-of-injury care by medics or soldiers directly

Tactical Combat Casualty Care (TCCC)

Prolonged Field Care (PFC)

Casualty evacuation

Forward surgical teams (Role II & III)

Burn management

Surgical wound preparation

Negative Pressure Wound Therapy (NPWT)

Military hospitals

VA hospitals

Rehabilitation and outpatient home recovery

CLEANS & HEALS

ViaCLJR is engineered around a simple but critical objective:

Maintain an optimal wound environment during the time that matters most, between injury & definitive care.

ViaCLJR's proprietary Copper-Iodine technology helps reduce microbial burden while preserving viable tissue and supporting the body's normal healing processes, providing clinicians with an advanced wound management solution that extends days beyond conventional irrigation.

TOMORROW'S MEDICINES BUILT FOR TODAY'S MILITARY

Backed by FDA 510(k) clearance, ISO-certified manufacturing in the USA, patented technology, laboratory validation, and expanding clinical experience, ViaCLJR represents an innovative approach to advanced wound management for military, government, VA, and civilian healthcare systems.

As military medicine continues to emphasize prolonged field care and survivability in increasingly complex operational environments, ViaCLJR offers a next-generation platform worthy of continued evaluation, collaboration, and deployment.

ViaCLJR™ Protecting the Wound, Preserving the Tissue, & Supporting Healing, From Battlefield to Bedside.
