

# AppSec That Scales Faster Than AI Can Generate Code

Shift from “what can we possibly fix?” to automatically fixing everything you can. One platform for **SCA, SAST, and Secrets**: powered by agentic remediation, runtime threat modeling, and preventative guardrails.

## Remove Remediation Paralysis

Heeler autonomously investigates dependency upgrades and prepares merge-ready PRs, only when fixes can be fully validated.

## Prevent New Security Debt

Heeler enforces security and hygiene rules before code is committed and on every pull request.

## Focus on Real Risk

Heeler builds a runtime threat model from changeset-to-deployment correlation, no agents required.

# Deterministic Agentic Remediation Engine for AppSec
