

Strekk[®]

PRODUCT CATALOGUE

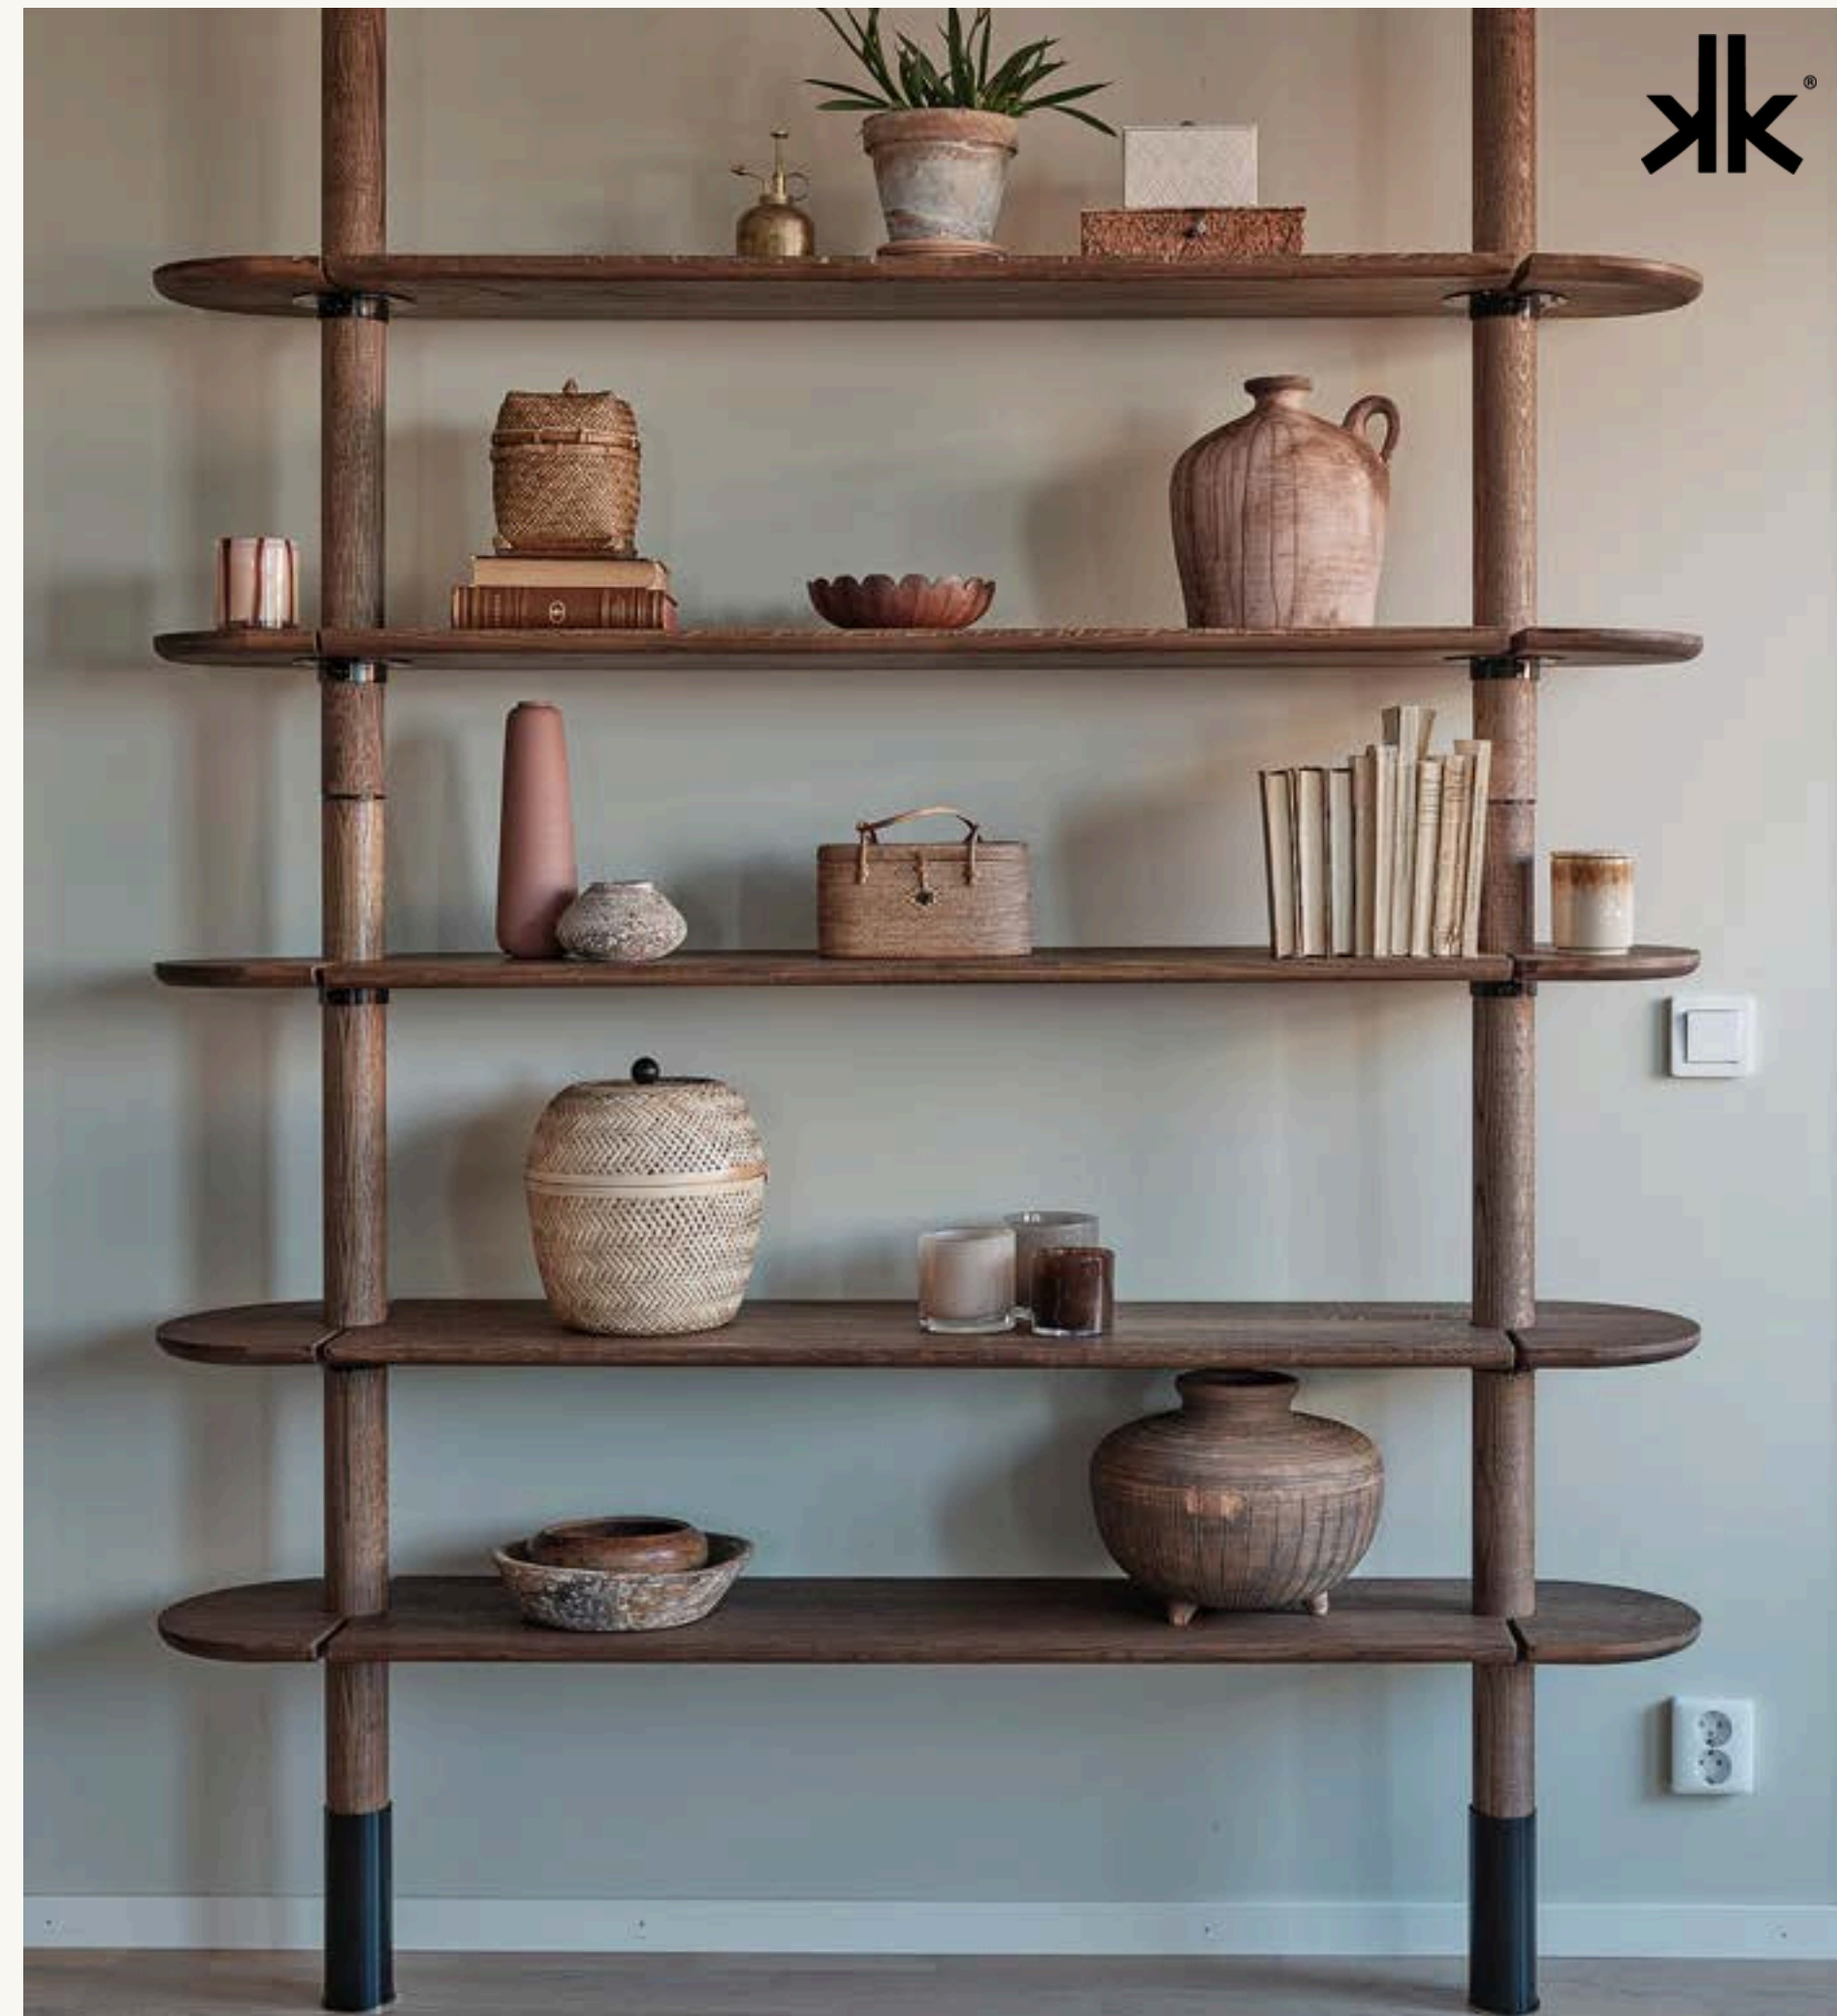

When the shelving itself is on display.

Strek is a new modular shelving system. Deeply ingrained in Swedish design traditions, it offers a delightful balance of simplicity, function, and lightness.

By elevating shelving from a functional item to a standout design object, Strekk becomes the smart, aesthetic choice in modern spaces. The pillarsystem offers several possibilities in placement, sizing, and configurations. It takes only two pillars to get started. Then simply add more pillars as needs grow and life evolves.

We believe in sustainability through longevity, which is why we insist on outstanding quality in materials as well as in craftsmanship. The Strekk System is made from solid FSC-certified timber, raised and refined by skillful hands in Europe.

Out of respect from nature's limited resources and the diligence going into every piece, we sincerely hope that each pillarsystem becomes a treasured pillar for inspired living – for this generation and for those that follow.

Simplicity is timeless
sophistication.

“The only thing that comes between the solid wood and a Strekk shelf is a skilled set of hands.”

From idea to shelving-system.

The "Strekk Premium System" was launched in the autumn of 2024. The result is a timeless modular furniture – a shelving-system based on quality, design and flexibility with pillars as a foundation.

Strekk's founder, Johan Thomson, grew up in his father's workshop. He has a fondness for wooden materials, a great interest in architecture, furniture and design, which has been a prerequisite for Strekk's existence.

For several years, Johan's idea grew and the furniture developed. During the period 2020–2024, the solution was developing via countless prototypes which today is the Strekk modular system, created for a lifetime of elegance.

Pillar, 65mm in diameter

Pillar in smoke-polished oak

Shelf, 23mm massive wood

Shelf-bracket in powdercoated black steel structure

Washer in powdercoated black steel structure

Shelf in smoke-polished oak

Respectfully made from nature's finest.

Craftsmanship is meaningless without high-quality materials. At Strekk, we work with the finest material that nature has to offer; wood. Our birch products are grown, sawn, dried and made locally by artisanal manufacturers in Lithuania, who also manufacture our oak products, with oak from Poland and Ukraine.

Strekk is created in interaction with nature, both when it comes to design and to philosophy. Naturally we only use wood from FSC-certified suppliers. The certification guarantees that the forest is managed sustainably to preserve biodiversity. This is our way of working with the world's most fascinating materials.

The manufacturing process.

Our shelving systems are carefully manufactured in Lithuania by experienced craftsmen. FSC-certified wood from Europe's forests is used and processed with precision in Lithuania.

The pillar brackets are manufactured with care in the Czech Republic, while the robust shelf brackets are manufactured in southern Sweden, and then surface processed in factories located in Stockholm and Eskilstuna.

It is important for us that our partners share our vision of quality and environment, something that is a prerequisite in all the work we do.

Materialselection.

The "Strekk Premium System" is designed with materials that highlight both functionality and aesthetics. The shelvingsystem is made of solid oak and birch woodrods to enhance the natural beauty and strength of the wood.

Solid shelves and pillars guarantees quality of the furniture. The metalparts are made of solid robust black steel, chosen for their strength and they are manufactured in Sweden and in the Czech Republic.

The choice of solid wood gives an authentic feeling with vibrant texture and variety, which is both beautiful and durable. In combination with the details of steel, a unique design with a focus on quality is created.
