## What is navify Pathology Lab Hub?

**With labs using so many different software programs to fulfill their needs, it is important that these different programs work seamlessly together.**

navify Pathology Lab Hub is software that links your existing Laboratory Information System (LIS) with the entire portfolio of Roche for Pathology Laboratory instruments and systems. It consolidates these individual connections into a single bridge linked to the LIS, then acts as a translator, enabling multiple systems to communicate and transfer data.

### How is navify Pathology Lab Hub different to my current lab software?

navify Pathology Lab Hub establishes a single connection to the LIS. This greatly simplifies your IT system, reducing maintenance efforts and costs. Typical labs have several LIS with multiple connections to support each instrument. By providing a single connection, navify Pathology Lab Hub minimizes complexity and costs by:

- ✓ Eliminating the need for multiple LIS and LIS connections
- ✓ Eliminating the connection costs of adding new instruments
- ✓ Eliminating manual integration processes, as new instruments connect automatically

# What are the benefits?

## Improved quality

The right data is available where and when it's needed by eliminating error prone steps and delivering consistent information across all instruments and systems.

## Efficiency

Less manual handling and faster availability of data means higher productivity.

## Accreditation and certification

Documentation of all actions in the lab improves visibility and traceability, while reducing error rate through automation.

## Easily expandable

**navify** Pathology Lab Hub is flexible and scalable to meet tomorrow's needs.

## Lab consolidation

**navify** Pathology Lab Hub can manage multiple sites and communication with several Laboratory Information Systems simultaneously.

## Simplified IT system

Manage a single connection to the LIS. **navify** Pathology Lab Hub enables plug-and-play additions, so future instruments connect automatically.

## Centralized monitoring

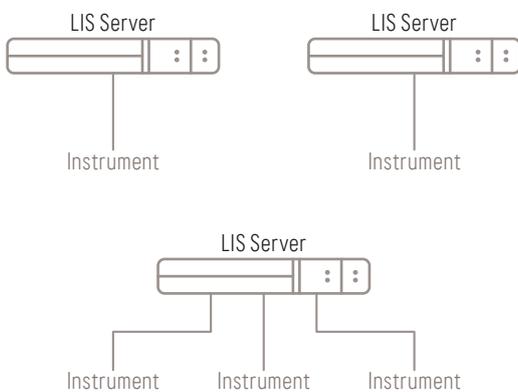

Greater visibility into daily operations as lab data flow can be monitored from your desk.

## Remote support

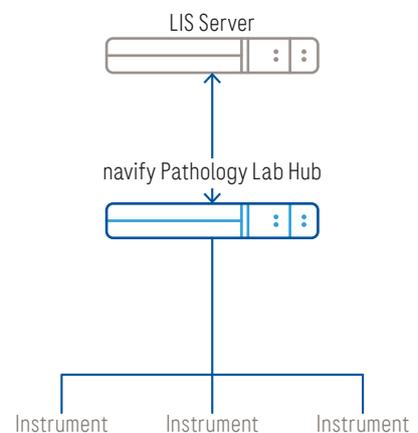

CareGiver Remote Support enables Roche customer support to monitor, troubleshoot and resolve issues remotely to minimize system downtimes.
