LEET SERVICES

REAL CLIENT. REAL OPERATIONS.

Keeping Production Moving

How a growing Michigan manufacturer strengthened network reliability, protected production equipment, and reduced everyday IT disruptions.

MANUFACTURING

When IT problems threaten the workday

For an electrical engineering and manufacturing company, dependable technology was essential. Engineers, office employees, and specialized manufacturing equipment all relied on connected systems. Recurring computer problems, inconsistent wireless coverage, and aging network infrastructure were creating avoidable friction.

For manufacturers, those problems carry a larger risk: a failed connection or unavailable workstation can interrupt workflows, leave employees waiting, and jeopardize production schedules. The company needed to modernize without introducing new risk to specialized equipment.

> **“Shortly after you guys started, I stopped hearing any complaining about computer problems.”**
> CEO | ELECTRICAL ENGINEERING & MANUFACTURING COMPANY

A manufacturing-first IT overhaul

Leet Services addressed the infrastructure behind recurring problems and built a more secure, manageable foundation for the company’s ongoing growth.

01

Reliable connectivity across the facility

Leet Services overhauled the network and improved wireless coverage, addressing persistent connectivity concerns at their source rather than repeatedly patching individual symptoms.

02

A dedicated network for manufacturing equipment

Production equipment was placed on a separate network from everyday office systems. This reduced unnecessary exposure, improved control over connectivity, and helped keep production technology logically separated from corporate devices.

03

Modernized and centrally managed computers

We migrated the company from its local Windows domain and Google Workspace to Microsoft 365, Entra ID, and Intune, giving IT a more consistent way to manage accounts, computers, access, and security.

04

Standards designed for a growing workforce

Computer equipment and employee onboarding were standardized, making it easier to deploy and support new workstations as the business expanded.

The business impact

40 → 80
Computers supported

50 → 110+
Employees over time

Fewer
Recurring IT complaints

Keep your people working. Keep your operations moving.
