General Medicine

The project's ongoing efforts delivered substantial medical aid to a broad spectrum of recipients. This included supplying life-saving medications, specialized medical devices (e.g., colostomy bags, wound dressings), hygiene products, diapers, and other equipment.

Over this period, the total amount of aid provided exceeded €384,490.21 distributed through over 80 transactions. Assistance reached Kharkiv and neighboring regions (Kyiv, Donetsk, Kherson), covering hospitals, polyclinics, primary healthcare centers, social service centers, as well as charitable organizations, civic initiatives, and individuals. This broad reach allowed us to cover a vast number of beneficiaries, providing them with critically important support and easing access to medical services amidst the ongoing war.

Total number of beneficiaries

Inclusive Equipment

In 2023, we launched the "Inclusive Equipment" program to support the most vulnerable population groups: people with disabilities and those with limited mobility in the Kharkiv region. In communities affected by hostilities and living under constant threat of shelling, such individuals often face daily challenges alone.

In the first phase of the project, over 700 people with disabilities received individually selected household and medical equipment. We distributed walkers, crutches, canes, wheelchairs, commodes, shower chairs, anti-decubitus mattresses, bedpans, as well as hearing aids, illuminated magnifiers, and white canes for the visually impaired. These were often items without which people could not leave their homes, take a shower, or even move within their own living space.

Additionally, 600 women and 180 children from vulnerable groups received hygiene kits.

CHIEF PARTNER

MDM (Médecins du Monde/Doctors of the World)

Ukraine Cancer Relief

The project's ongoing implementation yielded significant results in delivering vital support. It primarily focuses on providing free anti-tumor medication and other supportive medical drugs to cancer patients in Ukraine.

The Mission Kharkiv team reserves and ensures a FULL course of chemotherapy for patients residing in areas close to and adjacent to combat zones. In 2023, the project reached 1,135 new beneficiaries who received critically needed assistance. Throughout this period, 6,056 cancer drug distributions were made, underscoring the intensity and scale of the support provided to patients battling cancer.

Patient Feedback

Man, 59 years old

Lung Cancer

This August, I was diagnosed with aggressive lung cancer. Given my age and general health, I was prescribed very expensive medications—Osimertinib and Pembrolizumab. We were advised to contact Mission Kharkiv, and they successfully helped us obtain Osimertinib, for which we are extremely grateful. Mission Kharkiv staff responded promptly to our request and quickly helped us get the drugs. Thank you for your work! My treatment is currently ongoing with a positive outlook, but the cancer requires constant care and significant financial contributions that are beyond my means, even with family support.

Woman, 67 years old

Thyroid cancer

When the full-scale war began, I was left completely alone – no family, no way to buy the medications I'd taken for years. And then came this terrible diagnosis – thyroid cancer. My pension barely covered bread. Despair overwhelmed me; I thought I would simply fade away in this loneliness. But one day, my neighbor told me about Mission Kharkiv. I reached out to them, not fully believing anyone would help an elderly woman. But their response was immediate and so warm! Volunteers started bringing my necessary medications right to my home, bringing groceries, and most importantly – simply talking. Their humanity and care gave me the strength to go on living. I am endlessly grateful to Mission Kharkiv for not leaving me alone during this most difficult time.

Woman, 46 years old

liver cancer

The diagnosis of liver cancer like a death sentence, especially with the war already draining all my strength. I felt completely lost, losing hope with each passing day spent searching for funds. That's when I turned to Mission Kharkiv. Their response was immediate and filled with genuine humanity. They didn't just quickly react to my plea; they also helped me obtain life-saving medication.

Man, 64 years old

Pancreatic cancer

At 64, the diagnosis of pancreatic cancer felt like a final, devastating blow. I'd always been active, working, but suddenly I faced an incurable disease and immense bills for chemotherapy drugs. With no family, I felt completely alone and helpless in this fight. Thanks to Mission Kharkiv, I was able to start therapy. They're helping me through my chemotherapy course, and I have hope that I'll beat this disease. Thanks MK team for your work!

Woman, 48 years old

Breast cancer

When I was diagnosed with aggressive breast cancer amidst the prolonged stress of the war, it was a double blow. Doctors immediately prescribed a treatment course that turned out to be extremely expensive, far beyond our ability to pay. The staff at Mission Kharkiv responded instantly, demonstrating incredible humanity and professionalism.

Recovery Engineering

Basic Facts

€848.93

Overall project cost

Kharkiv Oblast is facing a significant healthcare crisis. The war has not only destroyed infrastructure but also disrupted the healthcare service cycle, leading to insufficient access to critical medical care for a large portion of the population.

CHIEF PARTNER

MSF (Médecins
Sans Frontières)

Local clinics, which are the backbone of primary healthcare, have sustained significant damage during the conflict, rendering them unable to meet community needs.

Mission Kharkiv implemented the specialized Recovery Engineering project, engaging qualified and experienced engineers. These experts provided consultations to international and local organizations. Our role as consultants is to ensure that recovery projects meet European engineering standards and promote transparency in the tendering process.

Save the Workers

The "Save The Workers" project was created for employees of enterprises providing critical services to the population.

Our mission within this program is to provide critical infrastructure teams with free-of-charge first-aid kits, which can offer a chance at saving lives during missile attacks.

Additionally, Mission Kharkiv has assembled an entire team of first aid instructors whose goal is to teach how to properly administer pre-medical aid using our first-aid kits.

This aspect of our project is the most crucial, as merely having a life-saving tool is not enough—one must know how to use it!

Financial Statistics 2023

Broad facts about expenditure

TOTAL PROJECT EXPENDITURE

€27 039 187,05

Project Expenses	€352,859.75	0.8%
Oncological Drug Distribution	€26,284,713.50	97.2%
General Medicine	€311,695.12	1.6%
Charitable Aid	€89,918.71	0.4%

The largest portion of the budget, 97.2% (€26,284,713.50), was allocated to Oncological Drug Distribution through the "Ukraine Cancer Relief" project, providing vital free anti-tumor drugs and chemotherapy to cancer patients, especially those near combat zones.

General Medicine received 1.6% (€311,695.12) of the total budget. This funding allowed for significant medical assistance to a wide range of recipients in Kharkiv and neighboring regions (Kyiv, Donetsk, Kherson). This included support for hospitals, polyclinics, primary healthcare centers, and social services, reaching 70,000 beneficiaries. Among them, 700 individuals with disabilities received individually tailored equipment, and 780 women and children from vulnerable groups were provided with hygiene kits.

Charitable Aid constituted 0.4% (€89,918.71) of the total budget, covering humanitarian efforts, while, crucially, total project expenses accounted for a minimal 0.8% (€234,322.93), highlighting Mission Kharkiv's high operational efficiency and maximum resource allocation to beneficiaries.

Crucially, total project expenses accounted for a minimal 0.8% (€352,859.75) of the overall budget, highlighting Mission Kharkiv's high operational efficiency and the maximum allocation of resources directly to beneficiaries.
