# Ukraine Cancer Relief

Focused on providing free-of-charge anti-tumor medication and certain other supportive medical drugs to cancer patients in Ukraine.

## Basic Facts

€10,191,280.26  
*Overall project cost*

193  
*New beneficiaries*

2,730  
*Drug dispensations*

In 2024, Mission Kharkiv continued its program, prioritizing uninterrupted treatment access for patients in combat zones. We significantly increased the volume of reserved medication courses, ensuring patients maintained consistent therapy and felt confident in their ongoing treatment.

Throughout the year, 193 new patients received assistance, with the total number of dispensed doses reaching 2,730. Significantly, 2024 saw the program's first-time dispensing of the innovative drug Keytruda. This expands treatment options for complex cases, aligning Ukrainian oncology patients with modern therapy standards.

# Patient Feedback

## Man, 69 years old

### Prostate Cancer

I'm a pensioner. I worked as an engineer my whole life. I never thought I'd face such a challenge as prostate cancer in my old age. Doctors prescribed hormone therapy and chemo, but when I saw the prices of the medication, I knew it was impossible. My daughter and grandchildren moved abroad, leaving me alone with my illness in an empty apartment. I was mentally preparing for the worst, but a fellow patient advised me to contact Mission Kharkiv. I wrote them a letter, describing my situation. The next day, they called me, and just a few days later, volunteers delivered the first batch of drugs. It was like a miracle. Now I'm undergoing treatment, and doctors note an improvement. I am immensely grateful to Mission Kharkiv for giving me back hope.

## Men, 49 years old

### Colon Cancer

I never imagined I'd face colon cancer at this age. After surgery, I needed chemotherapy, but the medications were incredibly expensive. As a displaced person from the Donetsk region, I'd lost all my property and had absolutely no funds for treatment. I felt desperate, stranded alone in an unfamiliar city.

My doctor advised me to reach out to humanitarian organizations, and Mission Kharkiv was among those he mentioned. I sent them an inquiry and was struck by how quickly they responded. The volunteers not only helped me obtain the expensive chemotherapy drugs but also provided moral support. Thanks to their assistance, I'm continuing my fight for life. This is true support in the most difficult time.

## Woman, 60 years old

### Multiple Myeloma

Multiple myeloma requires constant and very expensive treatment. After the full-scale war began, access to my medications became almost impossible, and prices were astronomical. I honestly thought it was the end. I heard about Mission Kharkiv while waiting at the doctor's office. My joy knew no bounds when they told me they could help. They regularly provide me with the necessary medications, allowing me to continue therapy and maintain my quality of life. I am very grateful to Mission Kharkiv for their invaluable support.

## Woman, 51 years old

### Ovarian Cancer

My ovarian cancer diagnosis hit hard, especially after losing work and savings due to the war. Chemotherapy was prescribed, but the expensive medications seemed impossible to find. Thankfully, a colleague suggested Mission Kharkiv, who, to our surprise, quickly found and helped us get the vital drugs. I'm now on my second round of chemo with positive progress, giving me strength to fight on. Thank you, Mission Kharkiv, for saving me!

## Men, 72 years old

### Stomach Cancer

I'm a lonely pensioner living in a village almost on the front lines. The diagnosis of 'stomach cancer' felt like a death sentence, as treatment was an impossible dream—no money, no way to get to the city. I thought I'd just wait for my fate. My military friend, however, recommended Mission Kharkiv. I called them, and to my surprise, the volunteers not only found the necessary chemotherapy drugs but also delivered them directly to my village, risking their lives. Thank MK team for not forgetting about elderly people during the hardest times.

## Inclusive Equipment

In 2024, we continued to implement the "Inclusive Equipment" program, which has become a reliable pillar of support for hundreds of people with disabilities in the Kharkiv region. Amidst the war and an unstable humanitarian situation, we remained dedicated to caring for those who most need assistance in their daily lives.

Throughout the year, equipment was provided to 397 beneficiaries—individuals who received wheelchairs, orthopedic mattresses, walkers, crutches, shower chairs, commodes, hearing aids, and other aids that restore mobility, comfort, and dignity.

We adhered to the principle of an individualized approach, ensuring that each person received precisely what would genuinely ease their daily life.

# Save the Workers

In 2024, the "Save The Workers" project significantly expanded its scope, both in terms of the number of workers reached and its impact on the safety of critical infrastructure in Ukraine. We continued to provide enterprises with first-aid kits designed to stop critical bleeding during missile and mine-explosive attacks.

These kits were made available free of charge to employees of enterprises who provide vital services to the population daily.

Mission Kharkiv's team of instructors continued to conduct training sessions on providing pre-medical aid using our first-aid kits.

# Financial Statistics 2024

## Broad facts about expenditure

### TOTAL PROJECT EXPENDITURE

€10 290 594,4

<b>Project Expenses</b>	€515,784.56	5.01%
<b>Oncological Drug Distribution</b>	€9 770 852,18	94.8%
<b>Charitable Aid</b>	€3 957,66	0.04%

Project Expenses accounted for 5.01% (€515,784.56) of the total budget. This category covers the costs associated with implementing all projects. Despite amounting to over half a million euros, its relatively small share of the overall budget highlights the high operational efficiency of project management, as the majority of funds are directed straight to core activities rather than overhead.

Oncological Drug Distribution represented the largest portion of the budget, accounting for 94.8% (€9,770,852.18) of the total. This substantial investment was dedicated to the "Ukraine Cancer Relief" program, which focused on providing free-of-charge anti-tumor medication and other supportive medical drugs to cancer patients across Ukraine. In 2024, the program prioritized ensuring uninterrupted treatment access, especially for patients in combat zones, by significantly increasing the volume of reserved medication courses.

Charitable Aid constituted a small but significant portion of the budget, making up 0.04% (€3,957.66). This funding supported various humanitarian efforts. Although it represents a minor share of the overall expenditure, it highlights the organization's commitment to addressing diverse, perhaps smaller-scale but crucial, needs that fall outside the main priority areas.
