PHISHING TACKLE

Security Awareness Training & Simulated Phishing

What is Phishing?

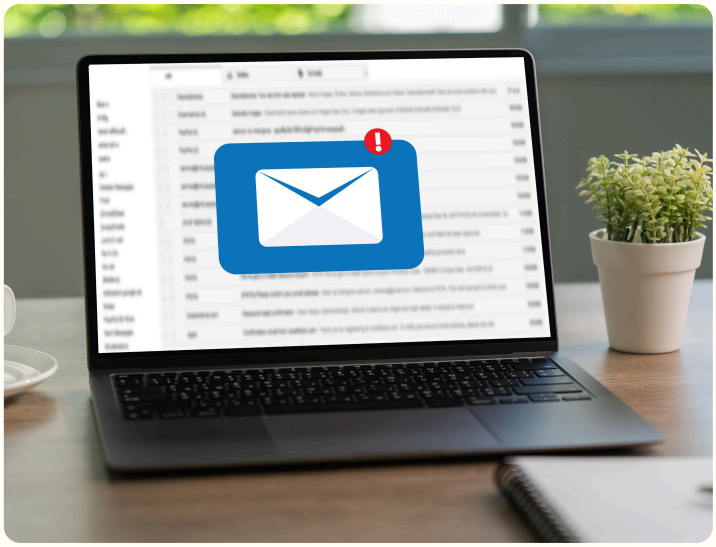
Phishing is at the heart of over 90% of data breaches. It is one of the largest cyber threats to organisations around the world. Phishing is a fraudulent attempt by attackers to gain sensitive information by the impersonation of a reputable source using email or other online communication. It's a technique that's worked since the mid-1990s and is still just as effective today.

Social Engineering

The bad guys will use techniques like social engineering which involves manipulating, influencing, or deceiving you in order to gain control over your computer system. The malicious actor, often referred to as a hacker, will use email as a popular method of gaining illegal access. Phishing, spear-phishing, and CEO fraud are all examples of this.

Fake Websites

In order for internet criminals to successfully 'phish' your information, they would usually direct you to a fake website that resembles the original. This is often done by providing a 'link' within the phishing email that they want you to click. The fake site would then prompt you to enter additional data.



How we can help

We use proprietary phishing software which combines realistic simulated email attacks and breach intelligence, with engaging training, informative landing pages with alarm bell indicators and quizzes, to immediately start reducing your cyber-risk.

If you're serious about protecting your business from an almost inevitable hacker attack, this is something you need to do today - we are the world's most cost-effective solution in reducing risk.

Over 90% of all data breaches start due to a spear-phishing attack.

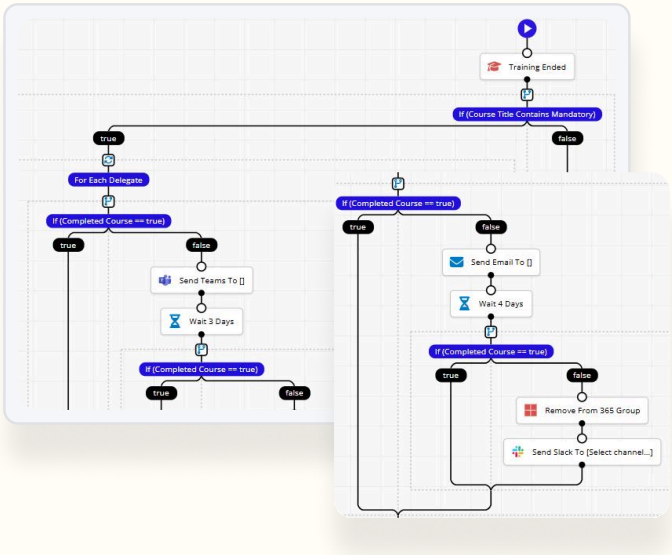
Smarter Insights, Immediate Action

PhishEye: Human Risk Manager

PhishEye allows us to build risk parameters based on your internal policies:

- The department's users sit in
- Their role or position
- Whether they've completed training
- How they interact with simulations

Place	Risk Level	Name	Risk Score	Phishing Profile	Department
1	High	Brenda Dayson	114.01		Sales
2	High	Riley Terrance	104.1		Product Management
3	Moderate	Ricky Brothwood	88		Sales
4	Moderate	Brian Dickson	87.9		Sales
5	Low	Cynthy Racher	78.18		Engineering
6	Low	Ray Finkle	78.14		Sales
7	Low	Jim Phish	77.92		Office Technology



Starphish: Automated Workflows

With Starphish, we then build automated workflows to act on these insights. For example, we can:

- Alert managers via Teams, Slack, or Google Chat about high-risk behaviour
- Flag non-completion of mandatory training
- Escalate repeated risky actions
- Even remove privileged access rights if required

CatPhish: Domain Monitoring and Takedown

With CatPhish, we continuously scan for and identify lookalike or spoofed domains targeting your organisation. Once detected, CatPhish helps you validate, prioritise, and take swift action. For example, we can:

- Detect and list domains impersonating your brand
- Gather WHOIS, DNS, and screenshot evidence automatically
- Assign a threat score based on risk indicators
- Generate registrar-ready takedown requests for rapid removal

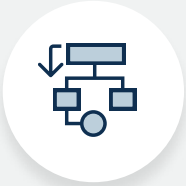
USE AI TO GENERATE SIMILAR DOMAIN NAMES

Monitoring	AI Generated Domain	Domain	Description	Risk: Score %
		phishingtack1e.com	Using the digit "1" instead of "l"	17%
		phishingtacke.com	missing the "l" at the end	17%
		phishingtacklè.com	Using "è" instead of "e"	18%
		phishingtàckle.com	Using "à" instead of "a"	18%
		phishingtackle.com	using "í" instead of "i"	18%

Find out the effectiveness of our Security Awareness Training & Simulated Phishing

PhishEye: Human Risk Manager

Build risk parameters based on your internal policies. Assess users by department, role, training completion, and simulation behaviour to identify and manage human risk effectively.



Starphish: Automated Workflows

Starphish creates automated workflows to act on human risk insights. Alert managers, flag training non-completion, escalate risky behaviour, and even revoke access when needed.

CatPhish: Domain Monitoring and Takedown

CatPhish continuously scans for spoofed or lookalike domains targeting your organisation. Detect, prioritise, and take swift action with automated evidence gathering, threat scoring, and registrar-ready takedown requests.

Simple Licensing

Flexible recipient counts, monthly billing and monthly contract available, or select an annual contract to make it even more a ordable.

No Usage Cap

Run as many automated phishing and training campaigns as you need. No caps. No restrictions.

Attack Simulations

Providing an out-of-the-box automated battle-ready phishing simulator, allowing you to start phishing your recipients within minutes.

Customised Cloud-Based Training

Fully customisable training content and flexible quiz creation tools to suit your needs and industry, with content that both entertains and provides concise and informative learning.

Customisable Landing Page Testing

Out-of-the-box landing pages allow you to create realistic login pages or create your own custom variations which allow for instant point-of-failure awareness and education.

Bespoke Quizzes & Surveys

Use the supplied quizzes and surveys to test the knowledge of your users, or create your own for an experience tailored specifically to the needs of your organisation.

Frictionless Training

User cannot access emails or create an account on the platform? No problem - users can use their phone number to receive a special code to access their training.

Remote workers can also access training using our 'Magic Link' system without needing access to computers.

Unified Service Platform (USP)

Our Unified Security Platform (USP) is to allow for the centralised management of your Security Awareness Training (SAT) and simulated phishing campaigns.

PhishHook Button

Our Integrated Outlook button allows users to instantly report suspicious emails to selected security email addresses. Should the user report one of Phishing Tackle's simulated emails, it is kept entirely within the platform available for reporting.

Comprehensive Reporting

Comprehensive reports providing both an overview and detail stats and graphs on key security awareness indicators. Each report can be printed or exported to your preferred format.

White Labelling

Enjoy a bespoke platform experience, from login page to platform design, everything is customisable.

Customisable Phishing Templates

Hundreds of easy-to-use and current phishing templates, with the ability to customise or add your own. You can include personal information and attachments to create your own spear-phishing campaign.

Microsoft Office 365 and Google Workplace Integration

Automatically sync your users from Microsoft or Google (or both) to ensure all user details are up to date.

Breach Intelligence

Knowing what information the bad-guys possesses is an important part of maintaining good cyber-hygiene. With the built-in breach intelligence checks, your users get automatically notified if their credentials have found their way onto the dark web.

Microsoft Teams Integration

Enjoy real-time training distribution and monitoring via Microsoft Teams®. Remove the barrier to learning, empower your organisation.

Automated Policy Management

Customisable and easy-to-use policy creation and distribution. Enable users to read and accept multiple organisational policies in a matter of clicks.
