

Digital Enterprise Platform for Legal Practice Enhancement

Unified legal data, AI innovation & private cloud control in one.

Law firms face increasing pressure to deliver efficient eDiscovery services whilst maintaining profitability and client satisfaction. Aurora adds strategic optionality to extend and enhance law firm business, layers and continually enhance innovation on top.

OFFERING AT GLANCE

Enhance Practice Value & Client Service

Transform how your firm delivers eDiscovery services by converting matter data into strategic client value. Aurora DataCore lets you leverage insights across client matters, demonstrating your firm's analytical capabilities and deepening client relationships. With unified visibility across your practice's entire matter portfolio and intuitive client reporting dashboards through Aurora Portal, you deliver exceptional client service whilst building stronger, more strategic partnerships.

Practice Management & Capacity Optimisation

Take command of your firm's eDiscovery operations with Aurora's centralised matter management designed for legal practice environments. Deployed across Consilio's trusted UK infrastructure, Aurora's intelligent workflows optimise your existing managed services arrangements whilst enhancing capacity utilisation across all matters. The early case intelligence engine, CoreECI, helps you focus on the most critical data, demonstrating value to clients whilst improving matter profitability.

Client Intelligence & Business Development

Aurora's advanced analytics enable your firm to uncover patterns across client matters, providing insights that inform legal strategy and strengthen client advisory relationships. By leveraging cross-matter intelligence and predictive analytics, you can anticipate client needs, identify expansion opportunities, and position your firm as a strategic technology leader. Aurora transforms legal data into client intelligence that drives business growth and competitive differentiation.

Innovation Leadership & Client Confidence

Harness artificial intelligence to enhance your firm's service delivery without compromising client data security. Aurora's integrated AI suite features purpose-built tools that augment your legal expertise, enabling faster case assessment and more sophisticated client reporting. With secure private UK infrastructure and local AI compute capabilities, you maintain complete control over client data whilst offering cutting-edge capabilities that differentiate your practice from competitors.

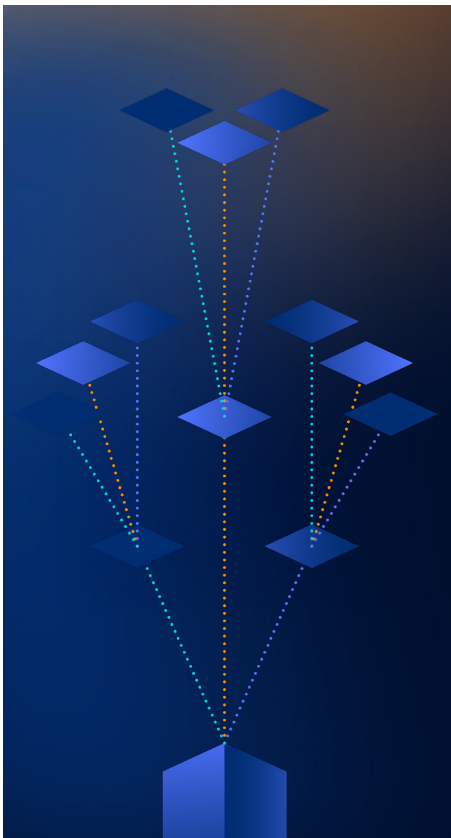

Client Platform Flexibility & Service Excellence

Support diverse client platform preferences whilst maintaining operational efficiency and service quality. Aurora liberates your firm from single-vendor dependencies, enabling you to adapt to client requirements whilst preserving service delivery standards. Whether clients prefer self-service capabilities or full-service support, Aurora seamlessly manages both approaches through your existing managed services arrangements, ensuring consistent excellence across all client engagements.

SOLUTION OVERVIEW

Aurora DataCore

Aurora DataCore transforms how law firms manage client matter data, converting complex client information into strategic practice assets. Built on 15+ years of innovations proven in legal practice environments, the platform creates a unified foundation that accelerates matter resolution whilst enabling cross-client insights within your controlled UK environment—essential for building stronger client relationships and identifying business development opportunities.

Aurora CoreECI

Aurora CoreECI revolutionises how law firms conduct early case assessment, delivering immediate, actionable intelligence that enhances client advisory services. With intuitive filtering and visualisation tools, your firm can dramatically improve matter efficiency whilst providing clients with deeper strategic insights. Features include

- Automated index creation optimised for legal practice workflow
- LLM-powered semantic searching for sophisticated case analysis
- Investigative flows for complex litigation
- GenAI summarisation for executive client reporting

Aurora Portal

The Aurora Portal serves as a comprehensive practice management centre, offering unified visibility across your firm's entire client portfolio. This intuitive interface provides real-time dashboards for matter tracking, client reporting, and resource allocation optimisation. Your firm can access detailed matter insights, demonstrate efficiency improvements to clients, and make data-driven practice decisions with unprecedented transparency—strengthening client confidence and supporting business development initiatives.

Practice-Enhanced AI Capabilities

Aurora's AI suite delivers transformative capabilities designed specifically for legal practice excellence. Developed by Consilio's specialists with deep law firm expertise, deployed with local AI compute processing within UK infrastructure, these AI models provide sophisticated document analysis, case strategy support, and client intelligence capabilities whilst maintaining complete client data confidentiality and eliminating dependencies on external AI services that might compromise client relationships.

LAW FIRM PRACTICE ADVANTAGES

Enhanced Client Service Delivery

Unified visibility across all client matters with sophisticated reporting capabilities that demonstrate your firm's analytical expertise and strategic value to clients.

Client Platform Adaptability

Seamlessly support diverse client platform preferences whilst maintaining operational excellence, preserving client relationships regardless of their technology choices.

Practice Efficiency & Profitability

Optimised workflows that better manage capacity and utilisation of existing managed services arrangements whilst improving matter profitability and resource allocation.

Business Development Intelligence

Cross-matter insights that identify expansion opportunities, inform strategic planning, and strengthen client advisory relationships through data-driven recommendations.

Competitive Differentiation

Innovation leadership through controlled AI adoption and advanced analytics that position your firm as a technology leader whilst maintaining client data security.

Dedicated Practice Support

UK-based legal practice specialists who understand law firm operations, providing strategic guidance for enhancing client service delivery and practice growth.

Why choose Consilio for law firm practice?

Proven Law Firm Expertise

Over a decade of partnering with leading law firms to enhance eDiscovery service delivery, now with dedicated UK infrastructure and practice-focused support teams who understand the business of law.

Client-Safe Private AI

Custom-built AI algorithms developed specifically for law firm environments, hosted on secure private UK infrastructure with local GPU inference—ensuring client data never leaves your control whilst delivering competitive capabilities.

Unmatched Practice Partnership

Dedicated UK-based law firm specialists, including Aurora Masters and Practice Development Experts, provide strategic guidance for enhancing client service, optimising practice operations, and identifying growth opportunities.
